**Subject:** Lysander Minerals Corporation

Reference BC's renaissance continues Exploration and Development Highlights British Columbia by Tom G. Schroeter p.21 "Teck Cominco conducted property-wide drilling on the Lorraine (formerly Jajay) copper-gold property ----".

This Lysander project is often the victim of confusion. To put the record straight there never was a Jajay property. The Jajay project assembled by Lysander during 1994- 96 consists of the Lorraine, Bootsteele, Dorothy/Elizabeth and Steelhead properties and a large number of located claims – expensive work in those days.

The project was named after Dr. Jay Hodgson of Queens University and Dr. Ja Hak Koo for his brilliant description of rock alteration process.

Unfortunately the Lorraine property has an underlying royalty!

There has been no change of the project name in our various agreements. So, repeat after me –

Lorraine property! (small)  
 Jajay project! (big)

Regards,  
 Don *Mustard*
