## THE EASTFIELD GROUP OF COMPANIES

## **GROWTH FROM SUCCESS**

Suite 110 - 325 Howe Street Vancouver, B.C., V6C 1Z7, Canada

885094

he Eastfield Group originated through the dedication of a team of professional geologists structuring their first public company listing in 1987 under the name Eastfield Resources Ltd. (ETF). The original corporate philosophy has proven very successful and simply involves the acquisition of early stage high quality exploration projects and then cutting risk and corporate dilution by attracting funding partners to advance those projects. The company mantra is LOW RISK HIGH LEVERAGE.

Success Leads to Shareholder Bonus
In 1997 the business approach had become so successful that Eastfield Resources Ltd. spun out a new company, gifting shares in Wildrose Resources Ltd. (WRS) to its shareholders on a one for one basis.

If at First You Do Succeed: Do It Again
In 2007, the Wildrose projects had evolved into substantive assets, one of which sparked the largest staking rush in provincial history and shareholders were again rewarded as Wildrose spun off a new company in Cariboo Rose Resources Ltd. which recently began trading.

New Opportunity for Shareholders

Eastfield Resources Ltd. has just announced the joining of its interest in the Jajay-Lorraine

Project with one of its property partners Lysander Minerals Corporation. The two are

currently being carried through a \$9 million to earn a 51% interest option by Teck Cominco Limited on this exceptional developing property. The restructuring will bonus Eastfield shareholders with direct ownership canadian in a new company owning at least 35% of the asset after Teck's earn-in. **Creek**

DDH-265

The core asset remaining within Wildrose Resources Ltd. is a 30% interest in the Spanish Mountain Project. The discovery of a Sediment Hosted Gold System at Spanish Mountain has sparked the largest staking rush in provincial history. These deposit types are host to some of the largest gold reserves in the world. The mineralized system at Spanish Mountain has already been traced for over 1.2 kilometres, is at least 400 metres wide and is open in every direction. One hundred holes were drilled this year with assays for over 50 holes still to be announced as assays are received.

# NEW Company Advancing Rapidly

Cariboo Rose has an exceptional portfolio of exploration projects. The Woodjam Project combines both advanced stage and exploration drilling on a large gold-copper system that compares

geologically to Cadia Hill in Australia and the Mt. Polley Mine which lies only 30 kilometres north of Woodjam. With \$1 million in cash and all of its other projects funded by other partners, Cariboo Rose is poised to grow.

The Jajay-Lorraine Project will be the centre-piece of a new company that will be jointly formed by Eastfield and Lysander and, subject to regulatory and shareholder approval, is expected to be public in the first quarter of 2007. The Jajay-Lorraine Project is an alkalic copper-gold-silver system that shares many strong characteristics with other deposits of this type in BC such as Galore Creek (Nova Gold), and the Mt. Polley Mine.

a NEW copper-gold district is emerging in the world-class Quesnel Terrane

Both Eastfield and Lysander will continue to advance their other projects and continue to gain through the newly created leverage of the new company.
