Geoff:

How about the following:

The Max is a major exploration project that has drilled some significant polymetallic mineralized intersections. Certainly the results from the best hole are very encouraging and would be rich ore if the zone has sufficient size.

The drilling is on the site of a small, past producing mine. Amarc (a Hunter Dickinson subsidiary) is running the project. The company will need to do considerably more drilling and have success in these holes before they can contemplate moving to the mine development stage.

Dave

Folks, I heard someone mention Minister Bell's comments in the interview while I was in Kamloops yesterday. The short answer is that the MAX prospect has further exploration potential, BUT it is a long way to go before making the kind of comments attributed to the Minister.

- 1) Most recent Press Release: Mar. 21, 2005 "Amarc Drilling Encounters Strong Silver Values at Massive Sulphide target in Central British Columbia" [property optioned from an arms length vendor].
 - 2) Max property: formerly called "Kamad Silver" - 80km north of Kamloops. Was (1920s-1930s) a small past producer of silver, gold, copper, lead and zinc. Within 4 km of the Max = the Samatosum and Rea Gold past producers (similar types of deposits).
 - 3) During Feb. 2005, Amarc (Jim Oliver/Mark Rebagliati) drilled 13 holes totalling 2728m on this "VMS" target. The company reported that these holes intersected at least 2 (sub-parallel) precious metals-rich, VMS horizons. The 'best' intersection I note is 7.2m @ 459g/t Ag, 2.7g/t Au, 1.27% Cu, 5.95% Pb and 9.17% Zn. This is a good 'hit'; however, there's still lots more drilling required.
 - 4) The Gov't is very pleased to see a re-activation of exploration in this general area, but much more hard work lies ahead to prove up its potential.
- Hope this helps.

Dave, I included Tamara because her email (Wed., Apr. 13/05 @ 17:17) was part of the email I received from you. In the future, I will NOT include a communications' person. Sorry.

Tom:

Minor point - prefer that you didn't add a communications person to the list if they weren't in my email listing.

Dave

Tom:

Could you provide Geoff and me with three sentences on the status of the Max - you may have seen Minister Bell's quotes in the paper on Wednesday.

Dave

Geoff:

Will research upon my return.

I believe this is an exploration project in the Barriere area that didn't have enough results that we had heard as of the end of December to warrant this level of enthusiasm.

Cheers,

Dave

Do you have a blurb on this or some details? No rush.

Pat Bell excited about possibility of new Barriere-area mine; Bell comments - CHNL - Pat Bell claims there is a chance that hundreds of new jobs will be created in the North Thompson. Pat Bell says the so-called Max property near Barriere is one of the hotter mining properties. Bell: Here, you've got a very credible entity in the Hunter Dickinson Group that is working that particular site so it has big potential for the Barriere area, for all the folks up the North Thompson Valley. Certainly, I think we're pretty excited about. I'd like to see that project go ahead. That could be one of the most significant finds in the province for a long, long time, could lead to hundreds and hundreds of jobs.

HIGHLIGHTS

Afton (DRC Resources Corp.) - DRC announced that the first hole hit native copper and copper sulphides in "brecciated fine-grained rock" from 458' to 675' (217' interval). The hole was stopped due to caving and the core has been sent for assay. The holes are designed to test a previously known 10.5 million tonne resource grading approx 1.5% Cu plus Au and Ag credits.

Kamad Silver-Homestake Mine - Staking completed by Paul Watt (8 units) and Eagle Plains Resources Ltd. (156 units) to cover ground prospective for Devonian-aged massive sulphide Cu-Zn-Pb-Au-Ag deposits south of the Samatosum Mine. Watt's claims cover the K7 and Twin 3 deposits (formerly Esso/Homestake), with an aggregate tonnage of about 450,000 tonnes of precious metal-rich massive sulphides. The Eagle Plains claims surround Watt and the Kamad Crown grants (with a reported 1 million tonnes of silver rich massive sulphides) and extend down to the Acacia showing, an un-drilled massive sulphide prospect. This is a great injection of new blood and fresh ideas into this district, which has been dormant since Sam closed.

Poet Claims (Cleve Lowry) - I spoke with several other companies who plan to examine this excellent zinc prospect on Adams Lake

Mining Week - I will participate in an educational session for 70 local K-3 and Grade 5 teachers, to be held next Wed. It is being organized by MABC. Our Exploration Highlights poster will be sent up to HVC for their Saturday teachers visits.

New Ideas for a New Millenium Workshop - I will attend and give a talk on Sunday in Cranbrook - The title is "Potential for Intrusion-Related Gold Deposits in Southern BC".

Prospectors Assistance Program - Reviewed 17 of 47 applications so far, and they're still coming in!
