Subject: Terrane Metals Meeting with Minister Krueger - CONFIDENTIAL

Good meeting this morning (9-11am) with Terrane Metals in their fancy Van. office. 'Key' points:

Mt. Milligan-

* Nasty, brewing/festering/escalating 'conflict' with the **Nak'Azdi Native Band** (affiliate of Carrier-Sikani) from Fort St. James. They are adamant and very vocal that they will NOT join the treaty negotiation process and that they don't believe in the Provincial EA process. They insist that they want a "Veto" on any proposed developments in their territory. Terrane (Glen Wonders and Gillian Roy) have spent a lot of time and money dealing with this group and are VERY concerned with respect to their specific project, but also that it might serve as a precedence for other mining projects. The details were all relayed very eloquently to Minister Krueger - mainly as a "Heads Up". Apparently the Band has hired a famous law firm to help them - one that helped in the Haida negotiations. Terrane is worried that the Band's action are/will cause significant delays and money in the permitting stage, and may eventually scare off potential investors - not only with their project, but others in the Province. As you are aware, Terrane is trying to 'involve' both communities of Fort St. James and Mackenzie in the development and operation of the mine. [note: quite the opposite to the McLeod lake Band who are openly in support of the Mt. Milligan project].

* Mt. Milligan feasibility study (to be completed by year's end), based on \$1.75/lb Cu, is 'targeting' annual production of 264,000 oz Au at a cash cost (incl. Cu credits) of US \$140/oz. [Min. 15-year mine life]. [Overall Resources ~ 3.7M oz Au and 1.12B lbs Cu]

* 83-km power line from Kennedy substation in Mackenzie.

* Est. \$800M capital cost. Mine will create ~ 350 full-time jobs, plus an additional 100 contract jobs (construction ~ 700 jobs). Annual operating costs ~ \$160M (50% stays in region)

* Est. 30-month delivery date for new equipment (e.g. \$25M for big ball mill)

* Terrane has and still spending a lot of time and money on metallurgical testwork - incl. looking at secondary processing for gold (i.e. cyanide leach)

* Terrane has ~ 100 people working on their projects (~ 10 permanent staff)

* Plan to submit formal EA document in Nov. '07, and concurrently apply for Mines Act Permit.

* Production? Probably mid-2011

* **ISSUES:** 1) Road access (Fort St. James/Mackenzie) and First Nations
 2) Port of Prince Rupert - can handle new concentrate?

Tom,

Milligan currently has US\$450,000 budget for 2004. This is total project budget, so includes some cash-in-lieu on claims, met testing, etc.,,, so it is not all strictly "exploration-type expenditures". I anticipate we will increase the budget in our next global exploration budget review in late July.

We plan to start drilling in the week of July 5, holes will be located in know zones, as main objective is obtaining new met samples.

Rob

Say Am. \$400k on expl'n

Hi, Rob - sorry to bother you. Just wondering if you can share what your budget for Mt. Milligan is this year? As you know, I am trying to keep track of the provincial exploration expenditures and this year is seeing a huge increase.

Hi, Craig. Likewise - great to speak with you and Rael last week. CIM SV 15 is in the mail to you; hopefully you'll get it later this week.

Re: Placer Dome contact: Rob Pease, Exploration Manager, Projects, Americas Region
Email: Robert.Pease@placerdome.com
Tel. 604-661-3757 (direct)

Rob is the most familiar with the project. I know him well; feel free to mention my name, if you like, in your introductory contact. As a matter of fact, I talked with Rob last week about the project; he was on his way to the site for a brief visit. As I understand it, PD plans to test other targets on the property this summer, prior to proceeding with a revised feasibility study next year. This project may certainly fit your criteria nicely. In addition, I believe there is considerable upside potential regionally.

Subject: Mt Milligan Update

Bob and I met with 4 members of the Placer Dome Mt. Milligan Project team (Rob Pease, Peter Harris, Gary Lustig & Colin). Team on 3 day road trip; meeting with regional MEM, FN (McLeod Lake & Nak'azdli), Mayor & town councilors from Ft. St. James & Mackenzie, Chambers of Commerce, etc

Background:

- 1991 Feasibility study completed
- Project successfully cleared MDRP; Approval issued
- 1992-1998 Internal office studies and review
- mine development review certificate expired in Nov. 2003; not renewable
- 2004 favorable market factors and metal prices make Mt. Milligan attractive project again

General Discussion:

- exploration and metallurgical test work planned for 2004; modest 10 hole (HQ) program on the MBX Zone, test mineralogical controls; remodel geology, update ore reserve calculation and confirm metallurgical test work
- Placer Dome's corporate agenda is to focus on gold resource; minimum 50% content of any concentrate
- need 1.5-2.0 million contained ounces

Plan:

- complete exploration testing
- begin feasibility study late 2004
- complete feasibility study late 2005
- make production decision
- if feasible begin EA and concurrent permitting process
- Fast track legislation could apply (?)
- if feasible, begin 2 year construction program
- start-up some time in 2008-2009

Development Options:

- conventional open pit with crushing circuit (roll vs sag) and concentrator; high work index
- add autoclave and cyanide treatment and SX-EW plant for copper cathode and dore
- capital costs could range \$450-700 million
- \$45 million for 100 km powerline from Kennedy sub-station (or branch off Kemess Line)
- 45,000 tonne per day production; 10 year minimum mine life; approx. 200,000 ounces per year

Corporate Philosophy:

- sustainability focus
- Musslewhite model
- FN consultation; economic approach, training, employment, small business opportunities

thanks

Subject: Lane Weekly Report

Lane Weekly Report: December 7 - 11, 1998

Mining and Exploration News:

Gibraltar (Boliden-Westmin). The Gibraltar Management Team (GMT) announced in the media late Fri that the mine will cease operations (mining/milling) before the end of December, 1998. GMT has been unable to secure sufficient financing to satisfy current owner Boliden-Westmin. All employees (265) have received 12-week layoff notices and will be employed until the end of February. Continued low copper prices may soon result in mine closures elsewhere in the region/province.

Mount Milligan (Placer Dome). Mine Development Certificate amended/extended to 2003.

Mount Polley (Imperial Metals). Production for the first nine months of 1998: 17,532,551 pounds copper (or 7,952.8 tonnes Cu) and 74,222 ounces gold (or 2,308.5 kg Au). Average recoveries over the same period were 50.1% for copper and 69.9% for gold. Ore milled totaled 4.367 million tonnes.

Bornite (Ursala Mowat). Ursala Mowat conducted a brief mapping and sampling program on the Bornit claims, 100 km NW of Ft. St. James, to determine the source for several Cu-Zn and Cu+/-Ni+/-Co geoche anomalies. Brecciated ultramafic rocks containing pyrrhotite and minor chalcopyrite were identified in one locality. Trace amounts of bornite and chalcopyrite in siltstone and quartzite were identified in another locality.

Other:

"Mining and Exploration Review - 1998" paper in progress (little progress this week!).

Completed interview process with KMAC (and with help from DPOW) for CO-OP student position. Offered position to Shelly Allinson (CNC).

Preliminary discussions with GSB (Ron Smyth, Fil Ferri, Wayne Jackaman, Steve Cook, et al) to provide submission for funding to Muskwa Kechika Advisory Board.

Delivered brief overview of impact of Muskwa-Kechika Management Area on exploration in the area to Mackenzie LRMP members plus some higher level types (LUCCO, IAMC, etc).

General message delivered was that the creation of the M-K sent a negative message to industry regarding the possibility of future development in the region.

Specifically:

- the creation of M-K directly resulted in a decrease in exploration.
