Yikes - it should be made known at the LRMP that the staking of this significant prospect has taken place, and that access across the lake and valley should be assured. Amarc needs to talk to the LRMP mining reps soon! I will advise Adam to talk to Stevenson and Orgrzlo.

I am copying Greg McKillop on this to ensure he is aware that the staking of this deposit has occurred, in case it affects the completion of the Morrice LRMP. A valley bottom PA may make it impossible to access the deposit. Perhaps there are other land use tools that can help ensure the recreation/viewscape is minimally affected.

Greg - Nanika is a porphyry Cu-Au deposit in the coast range west of Berg. It has a resource of 16.4 mt grading about .43% Cu and perhaps 0.2 g/t Au. Amarc is a company controlled by Hunter Dickenson. They have \$11 million in the bank for BC work and are mainly interested in Cu-Au deposits & potential.

Mike,

I heard about this too, just a few days ago, but wasn't going to report it yet for confidentiality reasons. But I'm sure you guys are to be trusted! and I didn't know it derived from the porphyry list- thats a plus.

you are right to question land use concern. I didn't want to alarm Adam too soon so I didn't say much to him. Also, the Morice LRMP is in progress, its recommendations are final. I've heard that PA will be recommended for valley bottom (canoe route) for Nanika-Kidprice Lakes. The way I see it, new mineral claims at New Nanik should be the best possible ammunition for Peter Ogryzlo and Paul Stevenson (mineral industry reps) to modify the boundary or even kill the proposal before its fully hatched.

Gents, just talked to Adam Travis. Amarc has just staked Nanika, thanks to our Porphyry Cu-Au list that showed it was unstaked. Lorne Warren did the work for them. What is still not clear is what the land use status is of the

Maurice LRMP. Any idea Paul? I warned him before that it was in a proposed PA at one time and they should look into it.

They would probably like it kept confidential for now.

They've also staked a couple of grass roots targets in the Cariboo, south of Horsefly.

New Claims - Staking activity continues to be strong

- Hyder Gold acquired 240 units on an IOCG target 75 km east of Jade City, Minfile 104P 028.
- Nanika (93E 055) was staked by Hunter Dickinson Inc. within a week of Morice LRMP identifying Nanika Kidprice Lake system as an area to be recommended for protection. This will be very contentious as the Table, including mining sector representation, had reached consensus on PA proposals. Nanika Kidprice proposal dates from PAS (green blob) map of 1992. The Nanika prospect is near the head of the lake system and upper end of the PA proposal. The claims (100 units) also overlap a pre-existing No Staking Reserve (O/C 396, 16.2.60) that derived from possible hydro development; consequently the claims lie west of lake and do not include the shoreline of Nanika Lake. David Yeager of HDI is communicating with Brian Fuhr (MSRM), government rep at the Table.

Yellowjacket (104N 043) - Muskox Minerals released spectacular gold assays over a 30 metre width in YJ 02 01 drilled in December 2003. Bonanza intercepts in the hole are

- 513.5 g/t Au over 5.56 m (beginning at 14 m)
- 21.06 g/t Au over 0.9 m
- 40.42 g/t Au over 1.5 m
- 34.81 g/t Au over 3.05 m
- 57.88 g/t Au over 1.2 m (ending at 44 m)

This is not a "down dip" hole; previous work indicates the Pine Creek fault dips vertically so that true thicknesses (at angle of -58 deg) are about 1/2 the drill intercepts. The hole was drilled to the south, the same direction as most Homestake holes in their 1986-87 program. Hole YJ 03 02, a scissor hole drilled to the north, returned modest gold; best assay was 4.68 g/t Au over 0.3 m. Muskox resumed drilling in February but problems with squeezing of the serpentinite resulted in very poor progress to date. Pine Creek fault separates serpentinitized ultramafic rocks to the north from mafic volcanic rocks to the south.

Hi Tom,

Basically what I am trying to get my hands on is a description, preferrably detailed, of Quintana's drilling. I have asked Ben Ainsworth if he has any of the Quintana drill records and have not heard back. It was news to me that Granges had drilled so I will try Ned Reid. Where did you get the information regarding Quintana's hole # 12?

Too bad - someone must have 'wandered off' with it. I would have loved to see my notes re- the 1975 core logging. Other contacts? - Ben Ainsworth (cf. New Canamin); Bill Wilkinson (cf. Granby - he will probably be at KEG); Ned Reid (cf. Granges - lives in Quesnel).

Paul - Old reports give some interesting (significant) values:

i) 1968-1970 (Quintana): 15 ddh, incl. #12 - 100 ft. grading .627%Cu + .024%Mo

ii) 1991 (New Canamin): 5 ddh, incl. #5 - 157 ft. grading .4%Cu

iii) 1991 (007 Precious Metals Inc./Placer Dome): Potential resource = 20 million tons grading .43%Cu, .06 opt Au, plus Mo+Ag.

Importance: High

Checked my files - left file pre-1986 (when I moved down here) in Smithers office. I visited Nanika property in July 1974 (when Granges was drilling, under the supervision of Ned Reid), and again in July, 1975 (with Bill Wilkinson, property exam for Granby). I logged core from Granges' 1973 and 1974 drilling campaigns (presumably notes on file in Smithers office?) I have a few (4) photos of the property taken in 1975 in my Monthly Report file here. Assume you've seen Stockwatch material: Dec. 13/90, Apr. 17/91 and Aug. 14/91? Sorry - try Smithers office?
