SKYLINE/DELAWARE CAMP

During the past few years, Skyline Explorations Ltd. and Delaware Resources Corp. have been developing their respective properties located in the Iskut River area in the Laird Mining Division, British Columbia. To date, Skyline Explorations Ltd. has established proven, drill indicated and inferred reserves of approximately 1,100,000 tons of .704 oz. gold/ton with additional values in silver/copper and other minerals. Skyline's "Johnny Mountain Gold Mine" will be placed into production this summer at an initial production rate of 200 tons per day with an average ore grade of 1 oz. gold/ton. Initial annual production is estimated at 60,000 oz. gold with an increase to 100,000 oz. gold anticipated within the next two years. Delaware Resources Corp. "SNIP DEPOSIT" which is located two miles north-west of the Johnny Mountain Gold Mine has reported inferred reserves of 1,200,000 tons grading 0.75 oz. gold/ton. Delaware has recently announced a 4.46 million underground development program for the 1988 season which, subject to positive results, may be sufficient to proceed to a production decision.

THREE COMPANIES WHO HAVE ASSEMBLED STRATEGICALLY LOCATED CLAIMS IN THE SKYLINE-DELAWARE AREA ARE CONSOLIDATED SEA GOLD, JAZZMAN RESOURCES INC. AND HECTOR RESOURCES INC.

Hector Resources Inc. VSE-HEC

Exploration activity which commenced in June 1988 on the company's two Skyline/Delaware-Iskut River area properties (STU 4 & 5 claims - 27 units; and the SPRAY 1 & 2 and SKY 4 & 5 claims - 40 units) is anticipated to result in diamond activity by the end of summer. To date the 1988 exploration program has included trenching, prospecting and further evaluation of several known gold showings which were discovered during the 1987 exploration season.

Exploration activity has been concentrated in the area of the "GOLDEN SPRAY GOLD ZONE" where diamond drilling conducted during 1987 resulted in the discovery of an anomalous area of auriferous quartz/pyrite veining which is known to extend over 3,000 feet in strike length. In addition, a considerable amount of work has been directed towards a new area of gold mineralization located to the north of the "GOLDEN SPRAY GOLD ZONE" which was discovered earlier this year.

Results from this recent exploration work and the current diamond drilling program will be released when available.

 Issued: 1,100,000

Warrants are exercisable on the basis of 2 Warrants for 1 Share at \$0.95 per share until October 7, 1988.

Consolidated Sea Gold Corp. DRILLING SCHEDULED FOR SKYLINE PROPERTY

Diamond drilling is scheduled to commence within the next two weeks on the Company's Skyline/Delaware-Iskut River area Mineral Claims which comprise a total of 127 Units - the majority of which adjoin to the west those of Gulf International Minerals Ltd.'s - McLymont Claims. Recent exploration work has included additional sampling and trenching on several mineralized gold zones which were identified during the 1987 season. Exploration activity is being concentrated on the Southwest Zone, Southeast Zone and Northeast Zone, three areas of known gold mineralization on the GAB 11 and 12 Mineral Claims. In addition, the Company's geological personnel have been conducting exploration work in the area of the KEN SHOWING which is located on the northeast corner of the Company's Claim Block. Previous work conducted by Newmont Mining Corporation on the KEN SHOWING in 1972 resulted in one diamond drill hole intersecting 5 feet of 0.220 oz. gold/ton and 50 feet of 1.5% copper. Significant gold values have been established on both the Southwest and Southeast Zones with some values ranging between 0.688 and 1.858 oz. gold/ton. The main area of interest where work is currently being conducted in preparation of diamond drilling is the Northeast Zone where a large gossanous outcrop several hundred metres in diameter was discovered last season. Surface samples taken from this area last year resulted in assays ranging between 0.20 and 0.78 oz. gold/ton. A recent survey of the north-south Claim boundary between Consolidated Sea Gold Corp.'s Property and that of Gulf International Minerals Ltd. has established that the major gold discovery by "GULF" of their high grade Northwest Zone is located only 75 metres from Consolidated Sea Gold Corp.'s boundary. Gulf has reported one intersection of 36.5 feet of 1.6 oz. gold/ton and 39.73 oz. silver/ton in their D.D. Hole 87-29 together with several other holes with significant gold and silver values.

Jazzman Resources Inc. EXPLORATION PROCEEDING ON SKYLINE/ PROPERTIES FINANCING COMPLETED

Exploration programs are currently proceeding on Jazzman Resources Inc.'s two Skyline/Delaware - Iskut River area Properties - the GAB 9 Claims comprising 20 Units and the GER 1, 2 and 3 Claims comprising 44 Units. During the past several weeks exploration work which includes geological mapping, prospecting, geochemical sampling and trenching has commenced on the GAB 9 Claim Block. Work is being conducted in the area of the major northeasterly trending fault which extends for over 1 1/2 miles throughout the entire "JAZZMAN" Property. It is along this same major fault that "Gulf International Minerals Ltd." discovered their high grade gold/silver - "Northwest Zone". The "Gulf" drilling on their Northwest Zone is located within several hundred feet of the Jazzman - Gulf boundary and the initial "Jazzman" diamond drilling program will be concentrated in this immediate area. Management is also pleased to confirm the successful completion of a public financing of 600,000 common shares at a price of \$0.43 per share which will result in the Company receiving \$238,650.00. These funds, together with current working capital will provide ample funding to conduct substantial exploration and diamond drilling programs on the Company's 100% owned Skyline/Delaware Iskut River area Properties.
