N121

886157

Aug. 26/96

- Chat with Bill McMillan re-his recent visit with Joanne Nelson (Aug. 20-23)
- Poor weather = restricted site visit (no company people there - waiting to move in with drill)

GEOLOGY

- Volcanic package, assumed to be Permian in age. Incl. basaltic andesites, dacite and minor rhyolite (BM/IN took sample of rhyolite for zircon extraction).
- Permian (?) epithermal (vein) system, incl. banded barite.
- Large alteration system, located between Discovery zone (2m wide) and G-zone. (need to examine/sample ± core)
- also, should look at Zinc Lake area (to east of above)

N121

Aug. 27/92 Tel. conv. with Wojdak
- visited with Bill Bond (Goldfield) + George Cavey (Orequest)

Host rx. = int. to mafic volcanics (E-W trend)

Age: ? + locally bedded argillite
- mapped as being in Sylvester

- 'Rhyolite' unit \equiv completely silicified alt'n
~~is~~ centred on alt'd Fsp. Por.

- silica-barite veins (also MS 'veins')
