Subject: D.A. Terry Report, March 1, 2002

Regional Geologist Activity:

- Complete Evaluation of PAP grant reports
- Attend Parks Canada workshop on proposed Flathead National Park
- Update 2001 review talk for upcoming presentations

Mineral Exploration Activity:

DA Vent: Klondike Gold has submitted a NoW to drill 2800m in two holes on the DA vent property located along the Lumberton Road southwest of Cranbrook. The property is one of the higher potential "Sullivan-type" targets in the Purcells and is held by Supergroup Holdings Inc. The NoW indicated the program would begin at the end of March.

Fran: Klondike Gold have recommenced drilling on its Fran project this week, located northeast of Moyie Lake between the Fors and Vine prospects. Several attempts on the hole last fall reached approximately 400 feet in gravel without intersecting bedrock. The target is to intersect the Lower-Middle Aldridge contact with a 520m hole.

IMK Dimension Stone: A number of NoWs have been submitted by Norman Tribe for trenching on several properties in the West Kootenays to evaluate their building stone potential. Property names and rock types include: IQ - biotite schist, GGF 1 - greenschist, DQ 37 - quartzite, Inuk - quartzite. The work is scheduled to begin in May.

Jubilee Mountain: A NoW for the 2002 exploration program at Jubilee Mountain barite project has been received from Tiger Ridge Resources. They are planning to continue underground and surface exploration drilling around the Heli and Grizz adits. They plan to begin work in April.

Kena: The previously announced RVC drill program on the Kena project was abandoned after two holes due to technical difficulties. A compilation of all past drilling on the property has recognized that the high chargeability area identified in the recent IP survey connects the higher grade area of the Gold Mountain Zone with the previously identified Kena Gold Zone 2km to the south. A diamond drill rig is now being utilized to carry out a 1500m drill program to further define the gold distribution within the high chargeability corridor. In other news Sultan has optioned the Silver King claim group, located 1.5km southwest of the Gold Mountain Discovery Zone, from Arbutus Resources Ltd.. This property comprises 24 Crown Grants and 2 claims and covers the historic past producing Silver King Ag-Cu mine. A 1000m long by 260m wide chargeability anomaly associated with Silver King Porphyry, located 300m southwest of the Silver King workings, has not been previously drill tested and will be evaluated by Sultan as part of their 2002 exploration program.

Lone Peak: Drilling is expected to commence shortly on the Lone Peak Au, Cu-Ag property east of Fort Steele.

Nova: A NoW has been received from Alan Whaley to deepen an existing hole on the Nova property, in the Hellroaring Creek area south of St. Mary's Lake by an additional 600 feet.

IMS Rusty Patches: An application for a Mines Act permit to quarry approximately 400 tonnes of landscape rock from a preexisting bridge rip rap pit adjacent to the Sage-Flathead Forest Service road.

Win: A NoW has been received for a 12-hole, 600-foot drill program to test a limestone occurrence in the Racehorse Pass area along the Alberta/BC border. The program is intended to commence in August.
