Dear Tom:

Re: Prosperity, Porter Idaho

Included in this year's field program was 1,050 feet of NQ diamond drilling to test (in 4 holes) core recovery in the 'D' vein. Assays are awaited but 2 holes contain excellent mineralization and will add to known probable reserves on the vein. In addition, 2 previously unknown veins were cored between the Blind and D veins. These are each 3 feet thick and are sparsely mineralized (assays pending). A possible bulk tonnage area was discovered outcropping just south of the southern limits of the veins, where 2 grabs of pyritic rhyolitic tuff (?) returned 9 and 10 oz/ton Ag. Further sample results are pending.

If all material gets compiled before November 15 I will update you further.

Yours truly,

PACIFIC CASSIAR LIMITED

Michael Kenyon
