

PYRAMID PEAK Wed. Sept. 22/99

- + Lenaet ?
 - Sig Wiedner (Rio Algom) + 27°C
 (with Paul Wilton, Maggie Dittick)
 - ~ 250m deep on DWH 99-01
 target, was ~ 700m, but ^{went to 1000m}
 currently in gabbro (~120m)
 will push hole to ~ 900m, in
 hopes of getting thru gabbro
 - 2nd hole - on top of hill (chopper)
 to test LMC horizon

target = "Sullivan Time"
 horizon at LMC (only!)

- trouble identifying marker
 horizons in core (eg. Moyie,
 Higwatha, S...)
 → concern about reality/significance
 of "Rampart Facies"
 Sig doesn't believe in HTEM geophys.
 Target to 800m depth
 (technically feasible)
 size = 2100 M tonnes! (OUSA)

N
