Search for PGE/Nickel/Cobalt to Begin on Roman Claims, Harrison Area

5/22/01

TEUTON RESOURCES CORP ("TUO-V;TEUTF-0") - Search for PGE/Nickel/Cobalt to Begin on Roman Claims, Harrison Area

Teuton Resources Corp. intends to carry out a reconnaissance soil geochemical sampling program on its Roman property, located within the Harrison Lake-Hope ultramafic belt, approximately 120km east of Vancouver, British Columbia. According to government reports, the belt has recently become one of the most active staking venues in the province, with approximately 12 parties taking up claim blocks to date. Old reports on the formerly producing Giant Mascot nickel mine, located at the eastern end of the belt, indicate that significant platinum and palladium values accompanied nickel values in portions of the ore. This has prompted the current search for PGE (Platinum Group Elements) along the 60km long, crescent-shaped belt, particularly in areas showing anomalous nickel concentrations.

The Roman claims, acquired by staking, lie between the Andy property Minvita Enterprises Ltd. (to the west) and the Cogburn property or Leader Mining International Inc. (to the east). The Cogburn property was recently optioned by Leader Mining from private interests, and the company has stated its intention to immediately test for PGE in a large zone of nickel mineralization identified on the property in the early 1970's. Previous work on the Andy property has shown a strong, 400 m long, nickel-arsenic soil geochemical anomaly trending southeast toward the Roman claims. The extension of this trend coincides with an area of highly anomalous nickel, arsenic and cobalt soil geochemical samples taken on the Roman property in the early 1980's. Although nickel, arsenic and cobalt are frequently found together with platinum and palladium, none of this early work tested for PGE.

Work is scheduled to commence on the Roman property as soon as government permits are received.
