Photo Look W over Rozan

Photo - Afc - 'ridge' area

Host rtk. = 'Gd / crowded
fsp por) with 'sheeted' gtz
veins. - native Au + py

→ + Bi, W geochem anomaly

(i.e. Fort Knox target?)

= 'local' chloritic selvages along 'wider'
(2-3cm) gtz. veins, 'Better' Au values assoc
with such zones

Photos: Sheets of 2. veinlets
(12 per 8" width) in Gd.

Photos look E along ridge down
Hall Cr. to Nekin-Sulmo
Hwy

1/2 on 'Main' Rozan vein
(~100m long)

vein pinches & swells dips 45° - 65° E

12" to 36" width

.3 to .75 ~~opt~~ Au locally

Oct. 9/98

Visited by Dave Zefebure
and Mike Cathro in late Sept.

— examine 'potential' for
Fort Knox-type deposit.

DZ believes there is potential.

TGS.
