

RUTH VERMONT

June 17/97

- chat with Robert Lange, Minguet
- drilled (from u/a) on Ruth, Vermont in area of previously (old) reported drill intersections of ~5 ft over 4'
- drilling in 'dirty' Hadrynian ls. intersected massive pyrite, + acicular arsenopyrite with rare 'high-grade' gold assays.

Analogy (Tos)? - 1) Jersey Emerald  
 2) Cariboo Gold Quartz  
 (i.e. sediment-hosted gold?)
