<<TJS05-07 Kansas Drilling Results.pdf>>

PERSEVERANCE ZONE EXTENDS ONTO KANSAS PROPERTY
 44.4 metres grading 5.95 gpt gold

Tenajon Resources Corp. (TSXV:TJS), has been informed by its joint venture partners, Pinnacle Mines Ltd. and Mountain Boy Minerals Ltd, that the current drilling program has extended the Perseverance-Kansas Zone discovery onto Tenajon's Kansas Property. DDH 2005-44 was collared on the Kansas Property from a location 50 metres south of Pinnacle/Mountain Boy's previously announced DDH2004-34. DDH2004-34 intersected 21.3 metres grading 11.3 grams per tonne (gpt) gold, 50 gpt silver, 0.065% copper, 1.11% lead and 1.85% zinc along with a deeper zone averaging 6.4 gpt gold, 39.5 gpt silver, 0.13% copper, 1.35% zinc and 2.88% zinc over 5.8 metres

Pursuant to an option and joint venture agreement, Pinnacle and partner Mountain Boy Minerals can earn up to a 60% interest in Tenajon's Kansas Property by spending \$1.0 million on exploration and development over a 4 year period. In addition, Pinnacle has the right to earn an additional 10% in the Kansas Property by bringing it through a positive feasibility study within 4 years of earning its 60% interest. The Kansas Property is a crown grant claim, 19.5 ha in size, located 25km by road north of Stewart, BC.

Drilling results from DDH2005-44 are tabulated below:

Hole(#)	Intersection	From - T0	(Metres)	Core Interval (m)	Gold(gpt)	Silver(gpt)	Copper(%)	Lead(%)	Zinc(%)
44	63.7 - 108.1	44.4	5.95	24.87 0.06 0.79 2.11					
Incl.	65.2 - 80.4	15.2	9.2	23.52 0.05 0.79 1.28					
Incl.	80.4 - 86.5	6.1	1.0	18.0 0.06 0.46 0.76					
Incl.	86.5 - 108.1	21.6	5.42	29.3 0.07 0.95 3.23					
And	155.2 - 159.8	4.6	4.92	8.1 0.01 0.28 0.56					

The current drill program will continue on 50 to 75 metre centers along the projected strike of the Perseverance-Kansas zones. Assays are pending for DDH 2005-45 through 47, also located on Tenajon's Kansas Property. Based on the work to date, the Perseverance Kansas zone appears to have a minimum strike length of 1.1 kilometers and a vertical extent of 270 metres.

Mineralization in the Perseverance-Kansas Zone is consistent with the two main types of mineralization at the nearby, formerly producing Silbak-Premier mine. The Silbak-Premier mine produced 4.7 million tons that yielded approximately 1.8 million ounces gold, 41 million ounces silver, 4.2 million pounds copper, 62 million pounds lead and 20 million pounds zinc.

E. Kruchkowski, P. Geo., a qualified person as defined in NI 43-101 is in charge of the exploration programs on the Kansas property. Assayers Canada, an accredited laboratory conducts all assaying on behalf of the company.

In addition to the program on the Kansas Property, Tenajon will be operating two programs this season; one on the Ajax Property, a world-class Molybdenum project, and another on the high-grade Summit Lake Gold Project to follow up on last years successful drill program. All three projects are located near Stewart in Northwestern, B.C.

DRILLING AT PERSEVERANCE ZONE CONFIRMS ADDITIONAL MINERALIZED EXTENSION ONTO KANSAS PROPERTY
 3 metres grading 56.6 gpt gold

Tenajon Resources Corp. (TSXV:TJS), has been informed by its joint venture partners, Pinnacle Mines Ltd. and Mountain Boy Minerals Ltd., that drill results from recently completed holes continue to extend the Perseverance-Kansas zone discovery onto Tenajon's Kansas Property. DDH 2005-45, DDH 2005-46 and DDH 2005-47 were drilled on the Kansas claim along the strike of the Perseverance-Kansas zone. (See following drill results highlights and table below for more detailed information)

- DDH 2005-45 at -70° intersected 33.44 meters grading 3.03 grams per tonne of gold
- DDH 2005-46 at -60° intersected 3.05 meters grading 56.6 grams per tonne and
- DDH 2005-47 at -60° intersected 38.72 meters grading 1.83 grams per tonne

Pursuant to an option and joint venture agreement, Pinnacle and partner Mountain Boy Minerals can earn up to a 60% interest in Tenajon's Kansas Property by spending \$1.0 million on exploration and development over a 4 year period. In addition, Pinnacle has the right to earn an additional 10% in the Kansas Property by bringing it through a positive feasibility study within 4 years of earning its 60% interest. The Kansas Property is a crown grant claim, 19.5 ha in size, located 25km by road north of Stewart, BC.

DDH 2005-45 was drilled on the Kansas claim from the same location as DDH 2004-44 (see news release dated June 15, 2005). DDH 2005-46 was collared 50 meters south of the location of DDH 2005-44 and 45. DDH-47 was collared 25 meters south of DDH 2005-44 and 45, 25 meters north of DDH 2005-46.

Drilling results from DDH2005-45, DDH2005-46, and DDH2005-47

DDH #	From meters	To meters	Width meters	Au g/t	Ag g/t	Cu %	Pb %	Zn %

KANSAS DRILL RESULTS

Tenajon Resources Corp. (TSX-V:TJS), Pinnacle Mines Ltd. and Mountain Boy Minerals Ltd. are pleased to announce that recent drilling on the Kansas claim has continued to encounter gold mineralization including 36.58 meters grading 1.97 gpt of gold in hole DDH-2005-48 and 20.53 meters grading 1.88 gpt of gold in hole DDH-2005-49. Several other auriferous intersections were also encountered in both holes (see table below).

In addition Pinnacle and Mountain Boy have announced that drill holes DDH-2005-50 to 52 within their adjoining Big Missouri claim have intersected high grade gold mineralization, including 15.2 meters or 49.9 feet grading 34 gpt or 1.09 ounces/ton within the Main Breccia Zone, 133 meters north of the Kansas claim border. Tenajon has been informed by Pinnacle Mines Ltd. that the Main Breccia Zone extends onto the Kansas claim.

Holes within the Main Breccia Zone have reportedly encountered a new style of mineralization consistent with the high gold and silver bearing mineralization that was mined in the upper levels of the nearby Silbak-Premier mine, which produced 4.7 million tons that yielded approximately 1.8 million ounces gold, 41 million ounces silver, 4.2 million pounds copper, 62 million pounds lead and 20 million pounds zinc.

and	152.13	154.42	2.29	2.2	3.7	0.005	0.03	0.18

The Kansas claim is the subject of an option/joint venture with Tenajon Resources Ltd., pursuant to which Pinnacle and Mountain Boy are earning a 60% interest through the expenditure of \$1,000,000 on exploration over four years. The Companies can jointly earn a 70 per cent interest in the Kansas claim by exercising an option to deliver a feasibility study within four years of earning the initial 60%.

The Kansas claim is strategically situated 24 kilometers north of Stewart on the Granduc road. The infrastructure in the area is excellent with good roads, power and water.

Assay results from drill holes are released when received from Assayers Canada and the assay data has been through internal validation of quality assurance and quality control. Pinnacle Mines has established a sampling and assay control program with blind insertion of assay standards; noting that there is also an internal quality control and quality assurance program in place at Assayers Canada that includes blanks, duplicates and standards.

E. Kruckowski, P. Geo., a qualified person under National Instrument 43-101, is in charge of the exploration programs on behalf of the project operator. Drill core and trench samples are assayed by Assayers Canada of Vancouver, BC.

Pinnacle is drilling the Silver Coin property, north of Stewart (adjacent to the west of the Premier mine. I visited around July 21st. About a week ago, it announced some impressive, high grade gold and silver assays. The 2005 budget was 623K dollars. Mountain Boy Minerals is their joint venture partner. Ed Kruskowshki is in charge of the program, along with Alex Walsh. A few weeks ago Pinnacle announced an agreement with some Chinese partners. Apparently, Andre Bowering had been dealing with them for several months, including several visits to China.

Subject: Tenajon Resources Corp.: DRILLING AT KANSAS EXPANDS MAIN BRECCIA ZONE

<<TJS05-20 Kansas Drilling Results November.pdf>>

TENAJON RESOURCES CORP.
 PRESS RELEASE

November 7, 2005
 Suite 860 - 625 Howe Street, Vancouver, B.C. V6C 2T6 CANADA
 Telephone: (604) 687-7545 Facsimile: (604) 689-5041 #05-20

DRILLING AT KANSAS EXPANDS MAIN BRECCIA ZONE
 New Zone Returns 11 Meters Grading 28.7 Grams Per Tonne Gold

Tenajon Resources Corp. (TSX-V:TJS), has been notified by Pinnacle Mines Ltd. that recent drilling on the Kansas claim has continued to expand the Main Breccia Zone, including 16.77 meters of 4.2 gpt gold in hole DDH2005-72. A new gold zone, above the Main Breccia Zone (Dan Zone), was intercepted near surface and included 10.97 meters of 28.66 gpt gold in hole DDH2005-72. Assay results have been received for an additional 5 holes.

DDH2005-69 to DDH2005-72 were drilled on the Kansas claim to test the southern extent of the Main Breccia Zone. Dan has been traced by drilling and surface exposures from the Kansas claim into the Dan Fraction claim. DDH2005-69 and DDH2005-70 were drilled from the same location 48 meters south of drill hole DDH2005-46. DDH2005-71 and DDH2005-72 were drilled off the same set-up 41 meters south of DDH2005-69. DDH2005-64 was drilled 119 meters south of DDH2005-69.

Dan mineralization is similar to that in the Main Breccia, Perseverance, and other mineralized structures on the Silver Coin property. It contains sphalerite, galena, pyrite and chalcopyrite with occasional visible gold.

Drilling Intersects 30 Feet of 1.5 ounce Gold
 and 2 ounces Silver Per Ton within the Main Breccia Zone

Tenajon Resources Corp. (TSX-V:TJS), has been notified by Pinnacle Mines Ltd. that assay results from further drilling on the Kansas claim testing the south extension of the Main Breccia Zone have been received. Results include 9.15 metres of 47.37 gpt gold in hole DDH-2005-65 and 23.17 metres of 3.76 gpt gold in hole DDH-2005-74.

The most recent results from drill holes DDH-2005-65 through 79 continue to extend the mineralization of the Main Breccia Zone. All reported drill holes; DDH-2005-65, DDH-2005-66 and DDH-2005-72 to 79, are located within the Kansas claim located along the south end of the known Main Breccia Zone.

Results for the drilling are shown below:

True widths are estimated at 80 to 90% of the recorded intercepts.

DDH-2005-65 and 66 were drilled 96 meters north of previously reported DDH-2005-69 and 70. Drill holes DDH-2005-71 to 74 were drilled 41 meters north of DDH-2005-69 and 70. DDH-2005-75 to 79 were drilled 63 meters north of DDH-2005-69 and 70.

Based on the 2005 exploration program, the overall strike length of the mineralization as indicated by trenching and drilling is now defined over a distance of 2000 meters, a vertical height of 700 meters and widths varying from 10 up to 100 meters.

The Main Breccia Zone mineralization is typified by an early stage of pervasive sericite-pyrite-quartz alteration; a main stage of quartz stockworks, breccias and silicification carrying gold associated with disseminated pyrite, sphalerite, galena and chalcopyrite; and a late stage of semi-massive sulphide pods carrying significant base metal values. Mineralization at Silver Coin is consistent with the two main types of mineralization at the nearby, former producing Silbak-Premier mine which produced 4.7 million tons that yielded approximately 1.8 million ounces gold, 41 million ounces silver, 4.2 million pounds copper, 62 million pounds lead and 20 million pounds zinc.

The Kansas claim property is strategically situated 24 kilometers north of Stewart on the Granduc road. The infrastructure in the area is excellent with good roads, power and water.

Assay results from drill holes are released when received from Assayers Canada and the assay data has been through internal validation of quality assurance and quality control. Pinnacle Mines has established a sampling and assay control program with blind insertion of assay standards; noting that there is also an internal quality control and quality assurance program in place at Assayers Canada that includes blanks, duplicates and standards.

E. Kruchkowski, P. Geo., a qualified person under National Instrument 43-101, is in charge of the exploration programs on behalf of the Pinnacle and Mountain Boy. Drill core and trench samples are assayed by Assayers Canada of Vancouver, BC.

The Kansas claim is wholly owned by Tenajon Resources Ltd. Pinnacle and Mountain Boy are earning a 60% interest through the expenditure of \$1,000,000 on exploration over four years. The Companies can jointly earn a 70% interest in the Kansas claim by exercising an option to deliver a feasibility study within four years of earning the initial 60%.

**MINEFILL SERVICES COMPLETES RESOURCE CALCULATION
AND 3-D MODEL OF SILVER COIN***Approximately 75% inferred resource on Kansas claim*

Vancouver, BC - Tenajon Resources Corp., Pinnacle Mines Ltd., and Mountain Boy Minerals Ltd. are pleased to announce the results of a recently completed resource estimate on the Silver Coin Project located near Stewart, BC. The total inferred resource contains an estimated 500,000 ounces of gold, and 2.11 million ounces of silver. The inferred resource consists of 11.3 million tonnes grading 1.60 g/t Au, 6.64 g/t Ag, 0.06% Cu, 0.19% Pb, and 0.41% Zn and has been calculated in accordance with CIMM (2000) standards, at a geometric cutoff. Within this resource, a higher grade envelope containing 2.5 million tonnes at 2.69 g/t Au, 10.09 g/t Ag, 0.06% Cu, 0.33% Pb, and 0.58% Zn has been identified for a total of 170,543 ounces of gold and 660,504 ounces of silver. Mineralization is open along the strike and down dip. Of the total calculated inferred resource of 499,775 ounces gold and 2,110,693 ounces silver, the Kansas claim has 377,394 ounces of gold (approximately 75% of the total inferred resource) and 1,545,595 ounces of silver. Of the higher grade envelope the Kansas claim contains 146,418 ounces of gold (approximately 85% of the total inferred resource) and 490,048 ounces of silver.

The above resource calculation is based on 288 underground and 203 surface diamond drill holes, of which 74 surface holes were completed under the supervision of Pinnacle geologists, and the remaining 417 holes represent historical drill holes drilled by previous operators. The estimate was prepared on results of drilling only on the Main Breccia Zone and represents less than 5% of the overall structure of the zone.

A comprehensive program of data verification was undertaken by MineFill Services prior to the building of a resource model in SURPAC. This program identified 301 drill holes that could be verified to NI 43-101 standards with original assay certificates, whereas the remaining 190 drill holes were omitted from the resource model due to missing certificates, missing collar surveys, or other data verification issues. The verified drill data was then plotted onto cross sections where a sectional interpretation of the grade envelopes was made. The results were then digitized into SURPAC. A mineral resource estimate was then generated by sectional polygonal methods.

Investors are cautioned that, due to uncertainties attached to inferred mineral resources, it cannot be assumed that any part of an inferred mineral resource will be upgraded to an indicated or measured mineral resource or to a reserve status. Furthermore, confidence in these mineral resources is insufficient to allow any meaningful application of any technical or economic parameters to enable an evaluation of economic viability worthy of public disclosure. Investors are cautioned not to assume that any part of an inferred resource will be economically mineable.

MineFill Services is currently preparing a 43-101 compliant technical report for filing on SEDAR.

The Qualified Person for this release is Dr David Stone, P.Eng., P.E. of MineFill Services, Inc., Vancouver, B.C.

David M Stone, P.E.

Drilling to Commence on the Kansas claim

Tenajon Resources Corp. (TSX-V:TJS) Pinnacle Mines Ltd., and Mountain Boy Minerals Ltd. announce that drilling is commencing on the Kansas claim portion of the Silver Coin Project. As part of the initial phase 1 program, drilling will begin on section 7400N and will test the Main Breccia zones at depth. The initial holes will be in the order of 500 meters deep and located 200 meters west and downhill from the 2005 drilling beneath DDH 2005-44 and 45 which are located on the Kansas claim.

In addition, drilling is planned to commence late in the month to test the eastern area of the alteration zones that contain the Main Breccia Zone within the Kansas claim.

The Kansas claim is wholly owned by Tenajon Resources Ltd. Pinnacle and Mountain Boy are earning a 60% interest through the expenditure of \$1,000,000 on exploration over four years. The Companies can jointly earn a 70% interest in the Kansas claim by exercising an option to deliver a feasibility study within four years of earning the initial 60%.

E. Kruckowski, P. Geo., a qualified person as defined in NI 43-101 is in charge of the exploration programs on the Kansas claim. Assayers Canada, an accredited laboratory will conduct all assaying of samples from the property.

**Drilling on Kansas claim continues to Intersect High-Grade Gold
 Including 1.52m of 30.64 gpt gold and 7.60 m of 3.69 gpt gold**

Tenajon Resources Corp. (TSX-V:TJS) Pinnacle Mines Ltd., and Mountain Boy Minerals Ltd. announce that the 2006 exploration program continues to intersect high gold values in the Main Breccia zone on the Kansas claim. Results include 1.52m of 30.64 gpt gold and 7.60m of 3.69 gpt gold. The most recent drilling has extended the known mineralization 150 metres towards the southern border of the Kansas claim.

Assays have been received for the first 5 holes on the Kansas claim with assay results greater than 1 gram/tonne (g/t) gold listed in the table below.

The main objective of the program is to add additional resources to those announced on March 15, 2006. The total inferred resource on the Silver Coin project already contains an estimated 500,000 ounces of gold and 2.11 million ounces of silver, of which 75% is contained on Tenajon's Kansas Claim. The resource consists of 11.3 million tonnes grading 1.60 g/t Au, 6.64 g/t Ag, 0.06% Cu, 0.19% Pb and 0.41% Zn and has been calculated in accordance with CIMM (2000) standards at a zero cutoff by Minefill Services Inc.

The Kansas claim is wholly owned by Tenajon Resources Ltd. Pinnacle and Mountain Boy are earning a 60% interest through the expenditure of \$1,000,000 on exploration over four years. The Companies can jointly earn a 70% interest in the Kansas claim by exercising an option to deliver a feasibility study within four years of earning the initial 60%.

E. Kruchkowski, P. Geo., a qualified person under National Instrument 43-101, is in charge of the exploration programs on behalf of the project operator. Drill core and trench samples are assayed by Assayers Canada of Vancouver, BC.

Drilling on Kansas claim continues to Intersect High-Grade Gold
Including 3.05m of 20.63 gpt gold and 2.24m of 14.87 gpt gold

Tenajon Resources Corp. (TSX-V:TJS) is pleased to announce that it has been informed by Pinnacle Mines Ltd., and Mountain Boy Minerals Ltd. that the 2006 exploration program continues to intersect high gold values in the Main Breccia zone on the Kansas claim. Highlights of results include 3.05m of 20.63 gpt gold and 2.24m of 14.87 gpt gold. The Kansas claim is a gold-silver-base metal property located 24 kilometers north of Stewart, British Columbia in the Skeena Mining Division.

To date, over 9,456 meters of drilling has been completed in 56 holes on the Kansas claim. Assays have been received for 13 holes with assay results greater than 1 gram/tonne (g/t) gold listed in the table below.

and	145.88	147.26	1.38	1.13	6.1	0.005	0.06	0.26

An exact survey of all drill holes, trenches, and geological features has begun so that an updated 2006 resource calculation can be initiated by MineFill Services, Inc. The 2005 resource estimate that was calculated in accordance with CIMM (2000) standards, at a zero cutoff by MineFill, resulted in an inferred resource of 500,000 ounces of gold and 2.11 million ounces of silver on the Silver Coin Project. Approximately 75% of the total inferred resource falls within the Kansas claim. The resource consists of 11.3 million tonnes grading 1.60 g/t Au, 6.64 g/t Ag, 0.06% Cu, 0.19% Pb, and 0.41% Zn. Significant gold intersections in drill holes at the south edge of 2005 drilling have now been surveyed and will be incorporated in the 2006 resource calculation. The 2006 drilling has been focused on areas outside the 2005 resource, particularly east and west of the existing resource.

The Kansas claim is wholly owned by Tenajon Resources Corp. Pinnacle and Mountain Boy are earning a 60% interest through the expenditure of \$1,000,000 on exploration over four years. The Companies can jointly earn a 70% interest in the Kansas claim by exercising an option to deliver a feasibility study within four years of earning the initial 60%.

E. Kruchkowski, P. Geo., a qualified person under National Instrument 43-101, is in charge of the exploration programs on behalf of the project operator. Drill core and trench samples are assayed by Assayers Canada of Vancouver, BC.

Tenajon is a Canadian based precious metal and molybdenum mineral exploration company with a focus in western Canada. In addition to the Kansas claim, Tenajon is also conducting drill programs on its high-grade Summit Lake Gold Property near Stewart, B.C. and its bulk-tonnage Ajax Molybdenum Project near Alice Arm, B.C.

Drilling on Kansas claim continues to Intersect High-Grade Gold

Results include 1.22m of 86.30 gpt gold and 1.52m of 34.1 gpt gold

Tenajon Resources Corp. (TSX-V:TJS) is pleased to announce that it has been informed by Pinnacle Mines Ltd., and Mountain Boy Minerals Ltd. that assays have been received for 12 more holes from the 2006 exploration program and drilling continues to intersect high-grade gold and silver values in the Main Breccia zone on the Kansas claim. Highlights include 1.22m of 86.30 gpt gold, 1.52m of 34.1 gpt gold, and 6.08m of 11.83 gpt gold. The Kansas claim is a gold-silver property located 24 kilometers north of Stewart, British Columbia in the Skeena Mining Division.

During the 2006 exploration season, 13,725 metres of drilling was completed in 69 holes on the Kansas claim. Work has indicated that the Main Breccia zone is open along strike to the south and north of the current drilling. The table below lists results from the most recent assays.

and	176.52	178.05	1.53	1.21	3.30

Prior to this year's drilling program, MineFill Services of Seattle, WA completed a resource calculation on Silver Coin in compliance with CIMM (2000) Standards at zero cut-off which indicated a total inferred resource that contained an estimated 500,000 ounces of gold and 2.11 million ounces of silver. Approximately 75% of the total inferred resource falls within the Kansas claim. The 2006 drill program is aimed at possibly doubling this resource. MineFill is expected to begin a revised resource calculation in late November with results available early 2007.

The Kansas claim is wholly owned by Tenajon Resources Corp. Pinnacle and Mountain Boy are earning a 60% interest through the expenditure of \$1,000,000 on exploration over four years. The Companies can jointly earn a 70% interest in the Kansas claim by exercising an option to deliver a feasibility study within four years of earning the initial 60%.

E. Kruchkowski, P. Geo., a qualified person under National Instrument 43-101, is in charge of the exploration programs on behalf of the project operator. Drill core and trench samples are assayed by Assayers Canada of Vancouver, BC.

Tenajon is a Canadian based precious metal and molybdenum mineral exploration company with a focus in western Canada. In addition to the Kansas claim, Tenajon recently completed drill programs on its high-grade Summit Lake Gold Property near Stewart, B.C. and its bulk-tonnage Ajax Molybdenum Project near Alice Arm, B.C.

The TSX Venture Exchange has not reviewed and does not accept responsibility for the adequacy or accuracy of this press release. This news release may contain forward looking statements which are not historical facts, such as ore reserve estimates, anticipated production or results, sales, revenues, costs, or discussions of goals and exploration results, and involves a number of risks and uncertainties that could cause actual results to differ materially from those projected. These risks and uncertainties include, but are not limited to, metal price volatility, volatility of metals production, project development, ore reserve estimates, future anticipated reserves and cost engineering estimate risks, geological factors and exploration results. See the Company's filings for a more detailed discussion of factors that may impact expected results.
