Proposed text of press release - Ottarasko Mines Ltd.

Ottarasko Mines Ltd. recently completed an underground bulk sampling program on its Mt Skinner gold property near Tatlayoko Lake (West Central B.C.) - After driving 120 feet of drift and raise on the gold-quartz vein system, the company mined a 385 ton sample containing 595 ounces of gold and 610 ounces of silver - Since discovery in May 1990, total samp. production from the property adds up to 575 tons of ore containing 1130 ounces of gold and 800 ounces of silver

After a surface sort, the higher-grade selected quartz component of the bulk sample was shipped to Cominco's Trail smelter in southeastern B.C., while the lower-grade material went to Westmin's Premier Gold mill near Stewart in northwestern B.C. - The mining contractor was Drilltech Drilling and Blasting Co. of Kamloops, B.C. -

In 1996 Ottarasko plans to proceed with development of a spiral decline to access the deposit at a lower level, in order to mine an additional 1000 tons of vein material grading approximately 2 ounces of gold per ton -

The 4500 acre Mt Skinner property covers a one-mile long system of en-echelon intrusive-hosted shear-controlled mesothermal quartz veins and lenses - To date, less than 10% of the system strike length has been investigated by drilling, trenching or underground development - Ottarasko is seeking joint-venture partners for the further exploration of the entire system -
