

TJS - Summit LK

TENAJON EXPLORES NORTHWEST BC

Tenajon Resources Corp. [TJS-TSXV] is actively involved in three mineral projects in northwest British Columbia – two gold and one molybdenum. The company recently reported encouraging drill results from its Summit Lake Gold Project, located 50 km north of Stewart, BC. This year's \$650,000 underground and surface drilling program included a total of 35 drill holes.

The underground program was successful in expanding three high grade gold zones both along strike and down-dip including intervals such as 26.2 feet averaging 24.63 grams gold/tonne. The surface program tested three outcropping

gold zones – the Bend, Blueberry, and Road Zones – to determine their potential to enhance those being explored from underground. The surface targets are located 2.5 km to the northeast of the underground mine workings and results included 4.67 metres of 23.01 grams gold/tonne gold in

hole 2005-10.

The Summit Lake property was host to the past-producing Scottie Gold Mine where 201,462 tons averaging 0.474 oz.gold/ton was mined. There is a historical geological resource of 132,306 tons averaging 0.56 oz.gold/ton. This resource is not NI 43-101 compliant.

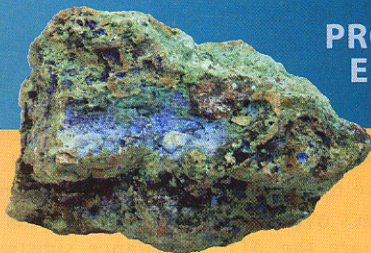

The company recently received encouraging drill results from the Kansas Gold Project, located 24 km north of Stewart on the Granduc Highway. Wholly-owned by Tenajon, **Pinnacle Mines Ltd.** [PNL-TSXV] and **Mountain Boy Minerals Ltd.** [MTB-TSXV] can earn up to a 70% interest in the project.

The latest round of drilling continued to expand the Main Breccia Zone with intervals such as 16.77 metres grading 4.2 grams gold/tonne in hole 2005-72. In addition, a new gold zone was discovered above the Main Breccia Zone (Dan Zone) near the surface that included 10.97 metres grading 28.66 grams gold/tonne. Five holes were drilled on the Kansas claim to test the southern extent of the Main Breccia Zone. The zone has been traced by drilling and surface exposures from the Kansas claim onto the Dan Fraction claim. While the property is considered to be a gold project, there are also significant values of silver, copper, lead and zinc. Further assays are pending.

The Kansas Gold Project has a geological resource totalling 1.77 million tonnes averaging 2.20 grams gold/tonne. This resource is not NI 43-101 compliant.

Tenajon has also reported the final results from this summer's drilling program at the Ajax Molybdenum Project located 14 km from Alice Arm in northwest BC. The 2005 drill program was successful in determining that the mineralized zones extended vertically beyond previous drill holes. Two twinned holes together show an overall increase in grade of 14% over the historical data. Drill hole DDH-5-03 intersected two zones ending in strong moly mineralization, with the last 38 metres grading 0.106% Mo that remains open to depth.

The Ajax property hosts a large porphyry-style molybdenum deposit that was drilled by Newmont Mining in the 1960s. Newmont estimated a drill-indicated, undiluted resource of 192 million tons averaging 0.123% MoS₂ with the deposit open to the north, southeast and to depth. This resource was calculated before implementation of NI 43-101. Tenajon is currently remodelling the Newmont resource figures to comply with the new reporting regulations.

PROVEN ASSETS IN AN EMERGING METALS MARKET

EAGLE PLAINS RESOURCES LTD.

- **Announces intent to form subsidiary company - Copper Canyon Resources Ltd.**
 - **1 for 1 stock split to shareholders of record – expected to close in early 2006**
 - **Joint Venture partner NovaGold announces inferred resource* at Copper Canyon of:**
 - 2.86M oz Au
 - 37.9M oz Ag
 - 1.16B lbs Cu
 - Deposit is open in all directions
 - * 165M tonnes grading at 0.54 g/t Au, 7.15 g/t Ag and 0.35% Cu
 - **NovaGold announces at adjacent Galore Creek project:**
 - \$50M / 65,000 meter diamond drilling completed during 2005
- Target Dates:**
- Summer 2006 for completion of final feasibility study
 - Mid 2007 begin construction
 - 2010/2011 commence commercial production
