

Fawn and Buck, Western Keltic Mines expects to drill both of these properties, located in the Nechako Plateau area, later in July.

Sustut. International Skyline Gold has submitted a NoW outlining a 40-hole ddh program on the Sustut volcanic redbed copper deposit, 50 km south of the Kemess mine.

RGS release of stream sediment data for NTS 94C, 93M and 93N, on July 3 resulted in only 1 sale from the PG office. The packages were also sold out of the Smithers and Vancouver offices generating approximately 15 additional sales.

Bob.

Lane July 10/98

Sustut Copper This mineral deposit is expected to undergo a \$200,000+ exploration program starting this spring. Operator Doublestar Resources has acquired mineral holdings of Falconbridge and is on the sidelines cheering the development of the Sloane Connector Road.

Quintette: Expecting further information on recent Teck press release about operations

excerpt form press release:

The Quintette metallurgical coal mine, which is based in Tumbler Ridge, BC, is
> owned 45% by Teck Corporation and 55% by Quintette Coal Limited. The mine has
> suffered, along with other Western Canadian metallurgical coal mines, as a
> result of a reduction in both price and demand for metallurgical coal on the
> world markets. These arrangements will provide the Quintette mine an
> opportunity to work with all stakeholders to achieve essential cost
> reductions, in order that the mine may be able to continue to operate until
> the end of the coal contracts in 2003.

Wrapping up editing of Exploration Review (1999).

Preparing for round up poster displays - BL/KM

Staffing:

Paneling of MRO candidates took place in Vancouver and PG. Thanks to the folks at Mineral Titles and GSB in Vancouver, particularly Rose Galatti and Christy Cattermole, for helping out with logistics. Offer expected to go out next week.
