

TAM OSHANTER

Mon
July 28/03
Sunny
+38°C
breccia

- with Gerry Stewart + David Terry
- Bengall Shaft - epithermal
- Deadman (K) Fault

Photo. Look W over Deadman fault to 'cuts' + to Wild Horse fault (green trees)

- walk along trace of Deadman fault towards intersection with Wild Horse fault.

Silicified (epithermal) boulders (below Maroon Fm.)

Unfortunately, only fr. pyrite and no gold

- Mimova did some drilling but not that successful (best hole ~10 feet @ 0.3 opt Au/g)
- Main quartz (epithermal) vein appears to be in situ parallel to Wild Horse fault structure.

Need to do some geophys. specifically targeting epithermal veins.
