C.I.M.M. DISTRICT 6 MEETING Texada Island Tour - October 1, 1992

Holnam West Materials limestone quarry has been in operation for 35 years supplying the cement, paper, and construction industries with quarried stone. From a beginning of 25,000 tonnes per year the quarry has grown 100-fold and will ship by barge over 2,500,000 tonnes of assorted products in 1992. The bread and butter customers are three cement plants - two in Delta-Richmond and one in Seattle. Chemical grade limestone (+97% CaCO₃) is produced for pulp mills and lime plants. White limestone is crushed and washed for a customer supplying the paint, plastics and filler industries. Rip-rap, fill, road base and railroad ballast are also on the list of products.

Coal from the Quinsam Mine near Campbell River is received by barge, unloaded and stockpiled, and reloaded to ocean-going vessels. Present projections of three quarters to one million tonnes per year can be handled through this facility.

Employees	Hourly	60
	Salary	11
