1. Figures are from MinFile, except for Copper Queen 1903-07 which are from Cox (1944).
2. These figures do not accord well with the reported mining history (including leasing) for this deposit, which suggests substantially more tonnage was mined.
3. These figures are approximate, derived by calculating backward from reported grade figures.
4. This figure is uncertain - MinFile gives 1906 production as 95,020 tonnes; I have assumed 9,502 tonnes, which is comparable to other years and yields commensurate grade figures.
5. Although this production is listed as Prescott, it may in fact refer to mining near the Paxton deposit.
6. All figures pertaining to these deposits are rounded slightly.
7. No copper concentrates were produced in this period.

1. These figures, from Cox (1944) and B.C. MinFile respectively, do not accord well with the reported mining history (including leasing) for this deposit.
2. These figures are approximations.
3. This figure is uncertain - MinFile gives 1906 production as 95,020 tonnes; I have assumed 9,502 tonnes, which is comparable to other years and yields commensurate grade figures.
