BobTom,

Re: Tsada update

- 14 trenches and 3,366m of diamond drilling completed in 1996
- \* - 1996 program concentrated on testing other veins besides main Tommy Vein
  - trenching on ~~the~~ Johnny Vein returned values up to 6.18g/t Au. over 2.7m. The vein was traced for over 100m along strike and 100m down dip by drilling. Drill results include 3.0g/t Au over 5.9m TW with local higher grade sections of ~~2.5~~<sup>16</sup>g/t Au over narrow widths.
  - New vein discovered - Barney Vein with 14.5g/t Au / 0.6m - trenching indicates increase in width with depth. Faulting has hampered following this vein with drilling.
- \* - Larry Vein traced for 300m <sup>+ trenching and</sup> <sub>by drilling</sub> with values up to 7.1g/t / 5.1m

Sorry geol. resource not publishable as yet.

Regards,
