(Aug. 93)

* Noranda's **Pavey (104M002)** and **Tepee (104M048)** exploration programs lie within the **Tutshi PAS study area**. Pavey was visited on **Aug 27** with geologist **Jesse Duke** and prospectors **Dave** and **Mike Heino**. Although there are at least **11 Minfile** occurrences on Pavey and **4** on Tepee Noranda is conducting grass roots exploration for bulk tonnage "no see 'um" gold mineralization on the western margin of the **Llewellyn Fault**. Llewellyn Fault is the locus of gold-arsenic-antimony-base metal-cobalt veins and skarn. The examination, although restricted to road access allowed some assessment of **PAS** and mineral values.
