Tom,

I went to see the Wadsworth vein a couple of weeks ago with Daryl Hanson and Wayne. Its 4 inches wide and exposed for about 15 m, but Wadsworth had covered most of it with rock, so there wasn't much to see. We stripped some of the cover off but did not see any V.G. Back at Bullmer's place, Wayne pulled out some pails that are filled with spectacular VG in quartz vein that is certainly from the same vein. So..... quite interesting but economic importance?? I will include it in my (very short) list of prospector highlights. (Not that Paul was on PA)

Paul

Thanks, Paul. FYI - Paul Wadsworth telephoned me this morning (from jail? -collect call) to discuss his new gold discovery. Have you talked to Wayne Bullmer about this? Paul spoke very highly of Wayne and suggested/ordered me to contact Wayne. Any comments? Tom.

Wadsworth

Hope (Wadsworth)- Mining of a 1000 tonne bulk sample by Telkwa Rose Minerals Ltd will proceed. Site visited with Doug Flynn and Bruce Graff to assess layout and rock conditions.

Todd Creek- drilling will proceed if Minaterra Minerals Ltd. (a Frank Callaghan company) and Island Arc Resources Corp. can raise funds.

Zymo- discuss preservation of core with Frank Nelson, arrange for transportation and storage on Zymo claims rather than dumping the core.

Eskay Creek- a fifth drill has been added to current deep drilling program.

Prospector Assistance- Office visit by Dan Blower (grantee) and Ken Blower, en route to Swan Lake/Rancheria area. Discussed recent RGS release which they will follow up. Shaun Turford- discuss program and review rocks in Francois Lake.

Other office visitors- Dave Kuran (Homestake) working briefly in the Smithers area, assessing Eskay Creek-type targets.

Don MacIntyre (GSB)- beginning field program.

Dave Javorsky- prospector

Morrison - Second release of 2001 ddh results, all holes are -45 degrees on 60 metre grid:

DDH	from	to	Intercept (metres)	Cu%	Au g/t
33			central low grade core, no significant assays		
34	35.7	74.7	40.0	0.52	0.29
35	2.8	89.9	87.1	0.29	0.10
36	172.2	297.2	125.0	0.43	0.25
	306.3	400.5	94.2	0.38	0.30
37	193.5	217.9	24.4	0.27	0.45
	221.0	349.0	128.0	0.55	0.34
38	10.7	126.5	115.8	0.37	0.13
	138.7	379.5	240.8	0.42	0.38

Mountain Boy Minerals - drilling on the High Grade vein (104A 011) showed it to be mis-named. Best silver values were below 1000 ppm silver in all 12 holes, with 1-1.5% lead+zinc. Property is on American Creek, near Stewart. All holes were drilled from one pad at different azimuths and dips!

Wadsworth gold vein - Respond to inquiry from Saskatoon-based company. Geological consultant to examine property within next few weeks.

Teck conducted reconnaissance exploration, in Sept, for Eskay mineralization in Whitesail area. Followed up on mapping by Diakow and Koyanagi (GSB map 1988-2) that shows rhyolite in Smithers Formation, upper part of Hazelton Group. Right stratigraphic position but strictly subaerial environment and no mineralization. Teck (Graeme Evans) is optimistic that Stewart area targets will be drilled next year, but fall-out of Cominco merger still in progress (more layoffs) and story could change.

RDN - Newmont reps, David Groves (Director, international exploration) and Richard Gorton visited Smithers office, trying to assess how RDN compares to other Eskay targets and how/ if to proceed with exploration. En route to the property to review drill core. Newmont will compile data from previous drilling by Noranda (Wedge zone) and on former Forgold property, south of RDN. Will Newmont continue to drill next year? Stay tuned..
