Final Report Summary

PROJECT HIGHLIGHTS:

- Hole #4 intersected for the first time appreciable copper mineralization in a dyke or apophysis of the main intrusion
- Significant mineralization has also been found in altered volcanic rocks near the intrusion
- Most of the other holes intersected significant sections of mineralization slightly below economic grade.

RESULTS:

IMPACT OF EXPLORE B.C. ON PROGRAM:

Grant award allowed a program extension of \$30,000 or 30% making it possible to drill the holes a little deeper and do more assaying.

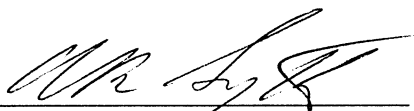

RECOMMENDATION:

A full grant payment in the amount of \$29,005 is recommended.
