

WOODJAM (1/1 EBA BUCKS)

889799

Oct. 20th

- chat with Rob Cameron

- [CONFIDENTIAL] PD will be returning
property to Eastfield

- still lots potential!

MEGABUCK (Woodjam) Feb. 16/99

- chat with Rob Cameron (Fox Geol.) - trying to option property from Bill Morton
(CONFIDENTIAL)
- Drilling in 1974 (Exploratory) + ~~the~~ 1983(?) Placer Demo yield long of interest was (eq. up to 150 m) of 15 ~~g/t~~ g/t Au and .15% Cu
- per Cu - Au target
- strong k-spar det'n

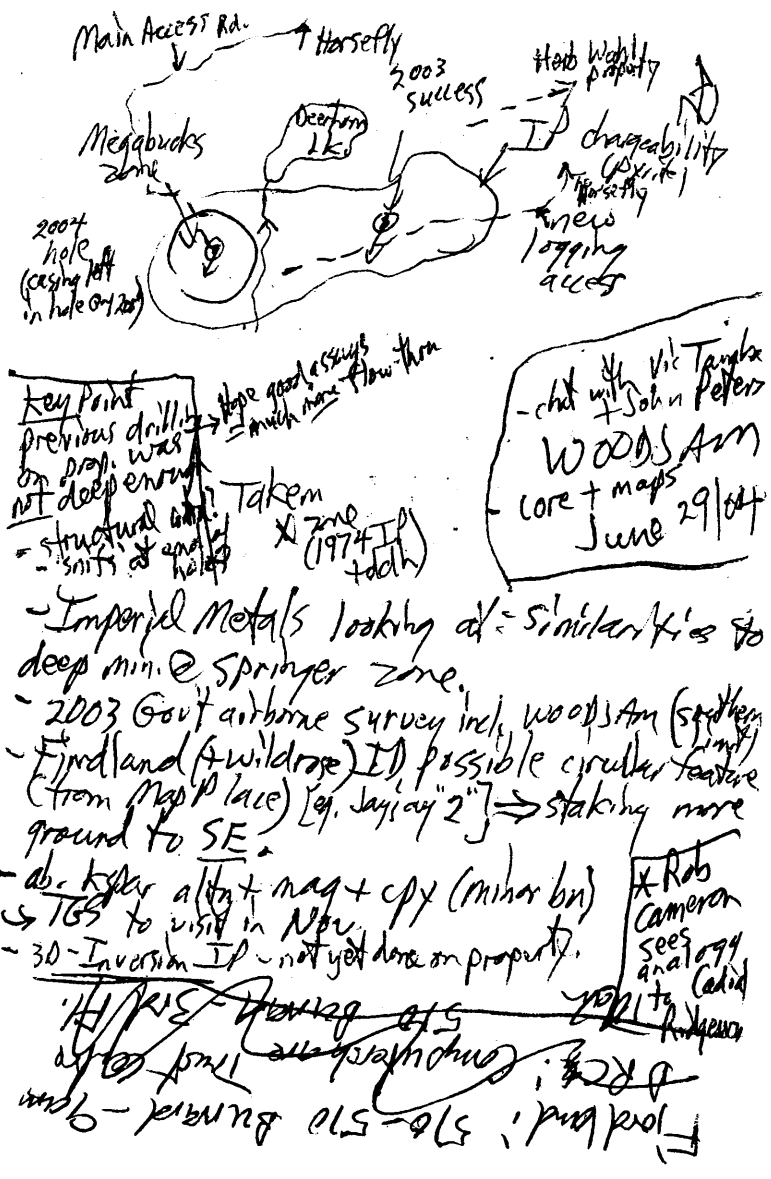

WOOD (AM)

Sept - 26/81

- chat with Bill Martin

- Vic Tanaka, Fjordland, outlined
+ did some geophysics, geol, etc.
for ~ \$35,000

→ Huge target (eg. TOCA)
- needs to be drilled!
- Vic working on flow thru
financing!

RC - System is NOT alkaline
 i.p. quartz normative!

- k-spar alt h f hydric.
 (related to Takomb batholith)

WRS -> Woodjam
-> Spanish Mtn
-> Indata

Canadian Creek, Yukon (Copper-gold)
Drill road construction, 2000

Indata, B.C. (gold, copper-gold), road building, 1996

page 103

Wildrose was created through a 1997 reorganization of Eastfield Resources Ltd. Certain assets (cash and mineral properties) belonging to Eastfield were transferred to Wildrose, and shareholders of Eastfield were issued new shares in Wildrose on a one-for-one basis. Wildrose began trading on the Vancouver Stock Exchange on June 24, 1997 with a diverse portfolio of Canadian precious and base metal projects assembled between 1986 and 1997.

Opportunities were hard to come by in the difficult financial markets between 1997 and 2002, but Wildrose was able to continue the exploration of its properties through outside joint-venture funding. During this time, approximately \$1.7 million of other companies' money was spent exploring Wildrose properties. This approach has kept dilution and operating costs to a minimum, while advancing our projects.

Project advancement will continue in 2003 with three of the four Wildrose exploration projects being funded by joint-venture partners. The company is confident that all the properties will be vended this year. The companies' active properties are:

- ❖ Woodjam, B.C. gold-copper.
- ❖ Spanish Mountain, B.C. gold.
- ❖ Canadian Creek, Yukon copper-gold.
- ❖ Indata, B.C. gold, copper-gold.

The company believes that each of these projects constitutes a prize that would attract a major corporation given positive results during a buoyant mineral cycle.

Woodjam

Located in south-central British Columbia this gold-copper project is modeled after Newcrest Mining Corporation's Cadia Hill deposit in Australia and Northgate Exploration's Kemess deposit in B.C. Cadia Hill commenced production in 1996 with a resource of 210 million tons grading 0.72 g/t gold and 0.18% copper. Some of the better holes on Woodjam include hole 02-25 with 0.52 g/t gold and 0.10% copper over 54 metres, hole 00-20 with 0.72 g/t gold and 0.10% copper over 144 metres, and hole 74-01 with 1.15 g/t gold and 0.11% copper over 100 metres. **Fjordland Exploration Inc.** may earn a 60% interest in Woodjam by completing \$1,500,000 in exploration by October, 2005.

Spanish Mountain

Located in south-central B.C. near the historic placer mining town of Likely, this 200 claim property is the probable source of several historic gold placers. Previous drilling has returned many notable intersections including 29.07 g/t gold over 10 metres and 7.99 g/t gold over 19 metres. A percussion drill hole completed in 2000 returned 17.2 g/t over 6 metres. Also, in 2000, a 2,100 ton test mining sample averaged 3.02 g/t gold. Spanish Mountain was recently optioned to **Skygold Ventures Ltd.** who may earn a 70% interest by making share and cash payments and completing \$700,000 in exploration over a five-year term.

Canadian Creek

Located in the southwestern Yukon, Canadian Creek comprises 234 claims over the western half of the Casino porphyry system. Two targets exist on the property. The Casino "B" anomaly, located in the
