Re: Banks Island K/Ar Sample

I checked with the Lab - your sample no. 29984 (YGKM 84-11) has not been prepared or separated at this point. It is, however, at the top of the list to be done when Verna starts mineral separations again.

A question: would you prefer one of the Muddy Lake samples to be put in its place and the Banks Island one done somewhat later?

Yes - Banks Is. - then Muddy Lk.
