Claim staking (1) - John Ball staked 1664 units in the vicinity of Galore Creek in early October. Some 300 units were refused by the Gold Commissioner. Ball abandoned the rest of the claims when challenged and has been granted 21 days (to mid-November) to relocate his claims. Inspection by MEM claims inspector will probably follow, either this winter or spring.

Claim staking (2) - A.W. Bowering, working for Ed Kruchkowski, staked about 1100 units in 104G, 104B and 104A (Galore, Foremore/Bam and Stewart areas) during late August-early September. Strong rumour that some of this staking will be challenged under Section 40.

Yellow Jacket (104N 043) and Rock of Ages, bedrock showings in the heart of the Atlin placer camp, have been optioned by Muskox Minerals Corp. Muskox made an initial payment of \$140,000 to the vendor, placer miner Lenard Diduck. The deal calls for spending of \$250,000 per year in each of the first 3 years. Roger Morton, ex-University of Alberta geology prof, is president of Muskox. Homestake spent \$1.66 million exploring the property in 1986-88 which obtained a number of significant drill intercepts (e.g. 17.9 g/t Au over 3 m).

New Claims - Staking activity continues to be strong

- Hyder Gold acquired 240 units on an ICG target 75 km east of Jade City, Minfile 104P.028.
- Nanika (93E 055) was staked by Hunter Dickinson Inc. within a week of Morice LRMP identifying Nanika Kidprice Lake system as an area to be recommended for protection. This will be very contentious as the Table, including mining sector representation, had reached consensus on PA proposals. Nanika Kidprice proposal dates from PAS (green blob) map of 1992. The Nanika prospect is near the head of the lake system and upper end of the PA proposal. The claims (100 units) also overlap a pre-existing No Staking Reserve (O/C 396, 16.2.60) that derived from possible hydro development; consequently the claims lie west of lake and do not include the shoreline of Nanika Lake. David Yeager of HDI is communicating with Brian Fuhr (MSRM), government rep at the Table.

Yellowjacket (104N 043) - Muscox Minerals released spectacular gold assays over a 30 metre width in YJ 02 01 drilled in December 2003. Bonanza intercepts in the hole are

- 513.5 g/t Au over 5.56 m (beginning at 14 m)
- 21.06 g/t Au over 0.9 m
- 40.42 g/t Au over 1.5 m
- 34.81 g/t Au over 3.05 m
- 57.88 g/t Au over 1.2 m (ending at 44 m)

This is not a "down dip" hole; previous work indicates the Pine Creek fault dips vertically so that true thicknesses (at angle of -58 deg) are about 1/2 the drill intercepts. The hole was drilled to the south, the same direction as most Homestake holes in their 1986-87 program. Hole YJ 03 02, a scissor hole drilled to the north, returned modest gold; best assay was 4.68 g/t Au over 0.3 m. Muscox resumed drilling in February but problems with squeezing of the serpentinite resulted in very poor progress to date. Pine Creek fault separates serpentinitized ultramafic rocks to the north from mafic volcanic rocks to the south.

Subject: RE: Muskox

In early 2004, Muskox drilled 12 holes on Yellow Jacket (Pine Creek) gold prospect, just east of Atlin. Three holes intersected "significant" mineralization, including the first hole (2.5m @ 26.1g/t Au) and the seventh hole (1.05m @ 225.6g/t Au); four holes yielded "insignificant"; and, the rest returned "low-grade" intersections. The company has defined 3 parallel, planar zones within the larger Pine Creek fault zone (where much of the previous placer gold has been mined), and these trend east-west and dip to the south. Drilling by Muskox in late 2003 (hole YJ03-01) returned a particularly high-grade intersection of 5.56 m grading 513.7g/t Au. The drilling is focussed on an area previously explored by Homestake Minerals in 1987-1989. Homestake encountered gold mineralization along the Pine Creek fault zone from near surface to depths of 100m and along strike for about 230m. Gold mineralization is coarse-grained and occurs in quartz veinlets withing fractured volcanics and altered serpentinites (Cache Creek Group). The previous high-grade intercepts were within only 15m of each other, so Muskox is considering a bulk sample (i.e. possible "nugget effect"). I believe the best potential to expand resources is to the west. Muskox has apparently raised some \$2M for exploration this year (presumably based on early 'exciting' results); wonder what will happen following 'disappointing' results from recently-completed second phase of drilling (i.e. hope a third phase of drilling and/or a bulk sample program is in the cards).

May be meeting with Muskox Minerals CFO on Thurs, Jun 24/04 a.m. Any material developments in Atlin - or any other BC properties they have?

Thanks, Linda. Yes, I saw the article regarding the LD claim - good potential! Alas, I won't be in Whitehorse. Hope your program goes well; keep in touch.

Subject: Prize mining - Atlin

Hi Tom
As per your request here is a summary of anticipated expenditures for 2005 for Prize Mining's Atlin Gold Project:

Total cost: ~\$500,000
Drilling: 3000 metres, ~20 holes
Geophysics: 50 line kilometres of ground magnetics
Other work includes: surveying drill collars, computer modeling

We anticipate drilling until Christmas and then starting again early in 2006 with an additional 4000 metres. And Prize has just picked up another property here in Atlin which will have a good size exploration program next year.
