

896728

Nanaimo

Yreka

1966

Rock Name *Limestone, uncryst.*

Locality *Yreka Mine*

Occurrence *Limestone in mine workings.*

Megascopic *Cryst. lsc with dark streaky banding.*

Serial No. *4465*

MPK Field No. *66-446*

Microscopic *Fracture zones in lsc (calcite) with fragments of gtz and calcite in fine silice matrix of gtz which shows flow-lines and is in discontinuous zones. Black opaque (galena?) is in fine matrix and occas. in the ~~lsc~~ larger gtz grains. Some large grains have shape of feldspar and some faint cleavage; no polygenetic twinning, sp. 4; probably labrad. or bytownite.*
