INDATA COPPER, GOLD VALUES FOUND - J.W. Morton, P.Geo.,  
Wildrose Resources

Ltd., reports surface sampling of gossanous exposures resulting from recent road building has revealed significant copper, gold mineralization at the Indata project about 130 km northwest of Fort St. James, central BC on an all weather logging road. Ten grab samples were obtained from new exposures within an area measuring 100 metres by 225 metres. These samples averaged 1.04% copper and 388 ppb gold. Six of these samples exceeded 0.35% copper (average 1.69% copper and 630 ppb gold) A single high sulphide site returned a sample grading 6.72% copper and 1734 ppb gold.

Mineralization consists of chalcopyrite, bornite and possibly chalcocite with pyrite and magnetite. Host rocks consist of intermediate to mafic intrusives and their hypabyssal equivalents. The rocks are highly altered to an assemblage of tremolite/ actinolite, quartz, chlorite and epidote. Arsenic and antimony, which typically accompany gold mineralization in quartz veins further to the east on the Indata property, are absent. This new mineralization occurs beyond the limits of previous geochemical or geophysical surveys and constitutes a new discovery.

A 10 hole, 955 metre, diamond drill program was completed 2.5 km further north in March of this year. The northern target is coincident with a positive airborne magnetic feature. Highlights of the March program included several significant intervals of copper molybdenum mineralization including Hole 98-I-4. Hole 98-I-4 returned 0.20% copper over 145.2 metres including 0.37% copper over 24.1 metres. Mineralization in Hole 98 I-4 is associated with swarms of silicified granodiorite to quartz monzonite dykes in an andesite host and occurs coincident with an increase in quartz-tourmaline and biotite alteration. Molybdenum occurs in Hole 98-I-4 in concentrations up to 360 ppm.

The Indata property consists of 17 claims totalling 146 units encompassing about 9,000 acres. Wildrose owns an 84.1% working interest with IMPERIAL METALS CORP. [IPM-T] holding the remaining 15.9% (subject to dilution).
