AUTERRA VENTURES INC.

[AUW-V] 3,591,090 SHS.

TOODOGGONE ASSAYS RECEIVED - Raymond Roland, president.

Auterra has reported results from the South Toodoggone Cairn property of 83.2 hectares located four km west of the Kemess North deposit and eight km northwest of the currently operating Kemess South mine owned by Royal Oak Mines Inc.

Anomalous copper, lead, zinc, silver and cadmium assay results have been reported from 23 rock and rock chip samples from Auterra's South Toodoggone Cairn property.

Mineralization on the South Toodoggone Cairn property consists of fault and fracture controlled vein, shear, breccia and carbonate replacement or skarn occurrences. Vein and shear showings are generally less than one metre thick. Breccia and skarn development observed to date attain widths of up to six metres. Preliminary mapping of carbonate units indicates skarn mineralization occurs at several locations on the property. Continuous strike lengths and widths cannot be determined until more detailed work is completed.

SAMPLE NO.	SAMPLE LENGTH METRES	COPPER %	LEAD %	ZINC %	SILVER g/T
20166	2.0	3.69	.09	1.36	65.7
20170	1.0	4.93	.08	0.64	90.3
20173	1.0	6.93	.02	0.82	130.4
20175	1.0	9.99	.01	0.06	245.0

Auterra's South Toodoggone Cairn property has the potential to host vein, shear, breccia, porphyry and/or carbonate replacement (skarn) polymetallic deposits. A geological, soil geochemical, trenching and preliminary drill program has been recommended.

Auterra recently changed its name with no share consolidation. (SEE GCNL NO.195, 9Oct98, P.6 FOR MORE DETAILS)
