NO. 180 (2000)
SEPTEMBER 20, 2000

NO. 180 (2000)
SEPTEMBER 20, 2000

DRC RESOURCES CORP.

[DRC-CDNX] 6,643,016 SHS.

DRILLING EXTENDS AFTON - John Kruzick, president, reports
MINERALIZED ZONE DRC Resources Corp. has
completed 12 diamond drill holes
on the Afton Mineral Zone that indicate the zone has a length of 700
feet, width up to 450 feet, depth of 1,000 feet and is open along
strike and depth for further exploration. The 100% optioned Afton
MIne Project is located 10 miles west of Kamloops, south-central
BC.

Hole DDH 2K-9, drilled at -73°/329° and DDH 2K-11 drilled at
-70°/262° have extended the mineral zone 150 feet to the northeast

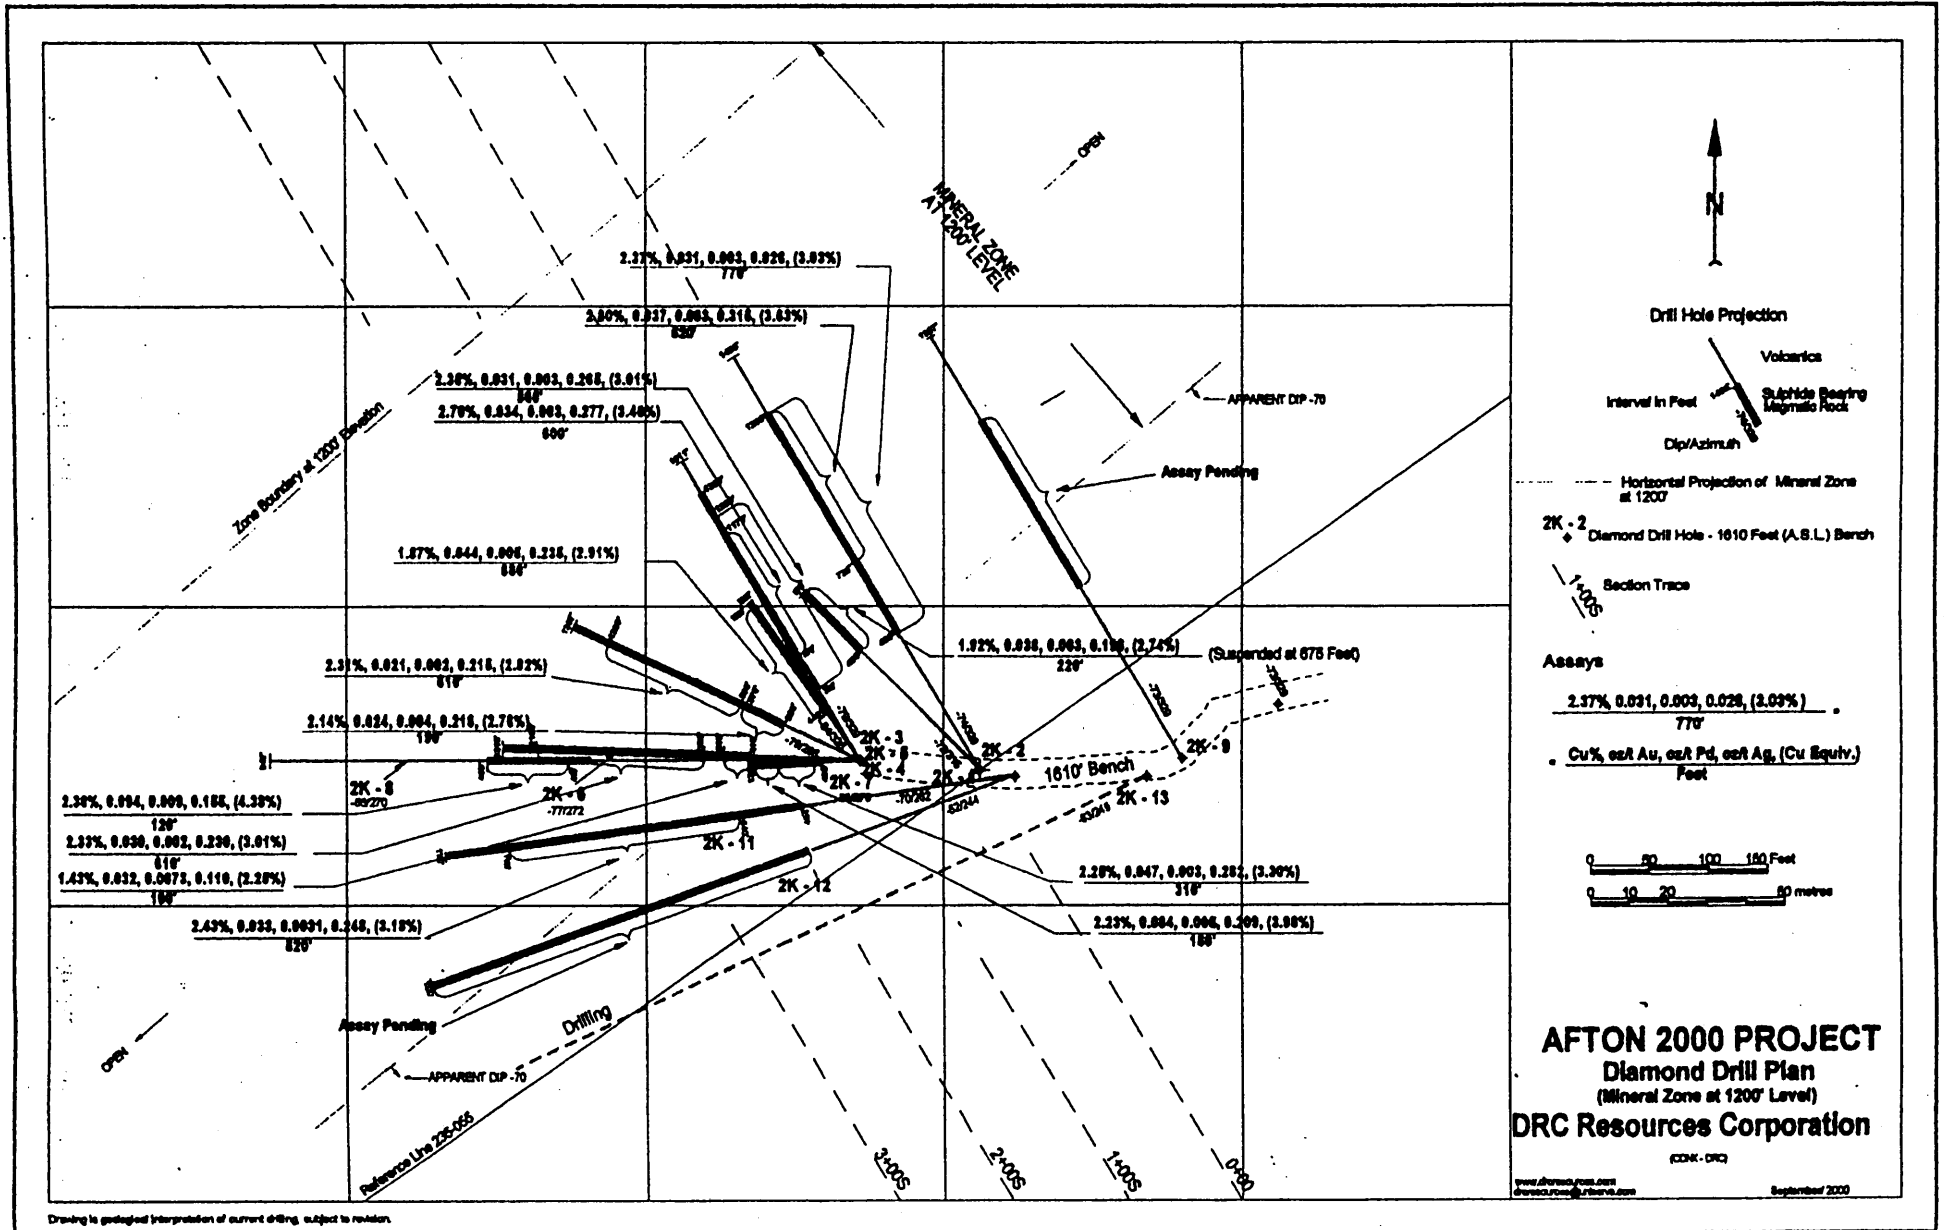

and 80 feet to the southwest respectively. To date, DDH 2K-11 has
the highest grade continuous mineralized section 90 feet of 6.04%
copper equivalent for a gross metal value of US \$112.00/ton.
Dec/2000 Copper Futures = US \$0.93/lb. (SEE ASSAY TABLE
OVERLEAF P.1 & DRILL HOLE MAP OVERLEAF P.2)

The grade of mineralization intersected in the 10 drill holes
assayed indicates an average grade 3% copper equivalent with higher
grade sections to 6% copper equivalent. The company has
commissioned Professional Engineers, J.J. McDougall and
Associates Ltd., to provide an engineering report with tonnage
estimates and tonnage potential from the compilation of available
diamond drill data. This report should be available about Sept.30,
2000. (SEE GCNL NO.168, 1Sept2000, P.1 FOR PREVIOUS AFTON
MINE PROJECT INFORMATION)
