ALPHA GOLD CORP.

[ALQ-CDNX] 11,207,066 SHS.

SKARN ASSAYS AWAITED - George Whatley, president, Alpha Gold Corp., reports the completion of a 4,600 metre (15,000 ft) diamond drilling program under the direction of Dr. Peter Megaw, on its 100% owned Lustdust copper, gold, zinc skarn/replacement deposit located in the Takla Lake region of the Omineca District about 200 km northwest of Fort St. James, north-central BC. The 2000 drilling was designed to follow, to depth and along strike, high grade copper, zinc and gold mineralization cut in the Canyon Creek Skarn Zone during Alpha's 1999 program. Over 80% of the 29 holes drilled in this year intercepted chalcopyrite rich skarn and/or chalcopyrite and/or sphalerite-rich massive sulphides. Skarn mineralization is laterally persistent and appears to improve with depth. Assays are pending.
