AFTON DRILLING REVIEW - John Kruzick, president, reports DRC Resources Corp. has received

a diamond drill exploration progress report on the 100% optioned, past-producing Afton Mine property located 10 miles west of Kamloops, southern BC. The report, dated 10Oct2000, was prepared by consultants J.J. McDougall and Associates Ltd. In the

conclusions the report states:

"The 2000 diamond drill program to date has established the

presence of a substantial 'primary hypogene copper zone' below and beyond the open pit bottom. The mineral zone, still open in all directions including to surface, is a northeast- striking tabular body with an average dip of -70° southeast. It measures in excess of 700 feet (213m) in strike length, up to 450 feet (137 m) in width and extending to a depth of at least 1,000 feet (303 m) below pit bottom, with no indication of narrowing along strike or down dip.

A preliminary tonnage estimate of the mineral zone tested to date indicates at least 25,000,00 tons averaging 2.5% copper or 3.0% copper equivalent. Further exploration of the mineral zone along strike and to depth will be required to develop additional tonnage.

With the disseminated nature of copper sulphide throughout the host rock, and an interpreted 'magmatic" origin, the concentration and volume of sulphide is not dependant on the degree of fracturing, as in the mined-out open pit, but on the size of the mineralized magmatic body."

Mr.McDougall recommends a \$4,200,000 exploration budget for the Afton Project. DRC Resources has the working capital for the exploration program and is continuing with the diamond drilling. (SEE GCNL NO.192, 6Oct2000, P.1 FOR PREVIOUS AFTON MINE PROJECT INFORMATION)

On Aug.9, 2000, DRC completed sale of 1,250,000 special warrants at \$4.00 each for proceeds of \$5,000,000.
