NOBLE METAL GROUP INC. [NMG-CDNX] 36,037,119 SHS.

CARIBOO PROJECT UPDATES - Dorothy Dennis, president, Noble Metal Group Inc., provides an update on its placer and lode mineral properties located in the Cariboo region of central BC.

Cariboo Placer Production Site: As weather permitted, restoration of the placer production site has been continuing and it is anticipated a good third of the production site will be restored before the close of the mining season.

Cariboo Mineral Claims: The company reports the completion of diamond drill hole No.00-1 on anomaly No.D7 on its Cariboo mineral property near the town of Likely, BC.

The vertical diamond drill hole was completed to a depth of 412 metres (1,352 feet). The splitting and logging of the core has been completed and samples are being prepared for analysis. Noble Metal has been advised several samples have been sent for thin section interpretation or petrographic analysis, which determines the mineralogical composition of the various rock types intersected in the core. All results will be released once receipt of the assays has been received by the geological consultants and correlation of the data has been completed.

Diamond drill hole No.00-2 is on anomaly No.D8 at 1500 North 1350 West, positioned to test a highly anomalous geophysical zone, 375 metres (1,230 feet) directly west of hole No.00-1, #D7. Drilling is expected to start 4Oct2000.

In April 2000, Noble Metal re-acquired 16,000 acres of claims and underlying four placer gold leases near Likely. The company re-acquired the mineral interest by divesting itself of 735,000 shares of Naptau Gold Corp. and relinquishing its control position in Naptau.
