AFTON PALLADIUM/GOLD - John Kruzick, president, DRC GRADES INCREASE Resources Corp., reports diamond drill holes 2K-16 and 2K-17 have extended the mineral zone 150 feet southwest of the previous drilling at the 100% optioned Afton property located 10 miles southwest of Kamloops, BC.

DDH 2K-16, drilled at -64°/241° and DDH 2K-17 at -72°/242°, drilled in the same vertical plane, intersected higher palladium and gold values. The increase in palladium and gold grades indicate a change in mineralogy with an increase in precious metals within the mineral zone to the southwest and at depth. SEE ASSAY TABLE OVERLEAF P.1.

DDH 2K-18, drilled at -62°/132°, presently drilling at the 2,040-foot elevation near the west pit-rim, has entered the mineral zone 100 feet higher in elevation than anticipated.

Readers may also view an Afton drill plan and sections at <http://www.drcresources.com>. (SEE GCNL NO.209, 1Nov2000, P.1 FOR PREVIOUS AFTON PROJECT INFORMATION)
