**FRONTIER MINERALS INC.**

[FRN-CDNX] 4,633,722 SHS.

**SIMILKAMEEN DRILLING STARTS** - James McLeod, P.Geol.,  
president, reports Nustar

Resources Inc. and 50/50 joint venture partner Frontier Minerals Inc.  
have begun a core drilling program on the Copper Mountain  
Syndicate project on Miner Mountain near Princeton in the  
Similkameen Mining Division, southwest BC.

The drilling program will further test the area between the  
established mineral inventories and will expand information on the

zone mid-way between these areas. In 1997 Nustar began testing the  
zone intermediate to the mineral inventories of 250,000 tons of  
0.5% copper in the Regal zone on west and an additional 600,000  
tons of 0.25% copper in the Bethlehem zone on the east. The 1997  
drill program concentrated on the westside of the area between the  
Regal and Bethlehem zones and indicated a thick section (200 feet+)  
of mineralized Nicola volcanics (typical of the Ingerbelle section  
mined by Similco) with grades of up to 0.9% copper; 0.05  
oz. gold/ton and 0.01 oz. platinum group elements/ton (PGE). The  
PGE is indicated to be about 15:1, palladium to platinum,  
respectively.

The current drilling program will test the eastside of the  
intermediate zone in an area of generally low magnetic response  
which appears to outline an area of intense alteration.

Frontier Minerals Inc. underwent a recent name change from  
formerly Golden Kootenay Resources Inc. and a five-old for one-new  
share consolidation. (SEE GCNL NO.51, 14Mar2000, P.5 FOR  
NUSTAR MEXICAN PROJECT INFORMATION)
