PACIFIC BOOKER MINERALS INC.

[BKM-CDNX] 3,143,481 SHS.

MORRISON DRILLING UNDERWAY - J. Paul Stevenson, CEO, Pacific Booker Minerals Inc., reports the 2000 drilling program is underway on the Morrison project, 65 km northeast of Smithers, central BC. Diamond drill hole MO-99-4 was drilled to a vertical depth of 1,490 feet which was the limit of the diamond drill's capability. The hole bottomed in mineralization. The hole is mineralized with disseminated chalcopyrite and bornite throughout. The top 1,000 feet averaged 0.75% copper and 0.4 grams gold/tonne.

Diamond drill hole MO-2000-5, located 140 meters southwest of hole MO-99-4, is currently at below 500 feet. Pacific Booker is

planning eight new drill holes in the Morrison deposit. Assays will be released when available. The company can earn a 50% interest in the Morrison project from NORANDA INC. [N-T]. (SEE GCNL NO.71, 11Apr2000, P.4 FOR PREVIOUS PROJECT INFORMATION)
