## NORANDA INC.

[NOR-T] 246,168,745 SHS.

**FAVOURABLE ASSAYS RECEIVED** - J. Paul Stevenson, CEO, FROM HEARNE HILL/MORRISON reports Pacific Booker Minerals Inc. has received assays on the extension of drill hole Mo-99-4 on its Morrison/Hearne Hill copper gold porphyry located in the Babine Lake district 65 km northeast of Smithers, northern BC. Pacific Booker can earn a 100% interest in the Hearne Hill part of the project by paying \$60,000 and issuing 500,000 shares, subject to a 4% NSR. Pacific Booker can earn a 50% interest from the Morrison part of the project from Noranda Inc. by advancing the project to a bankable feasibility study within four years with work commitments of \$2,600,000.

The hole was deepened from 307 metres to 466.56 metres. The grade remained consistent throughout the hole. The hole now averages 0.7% copper and 0.40 grams gold/tonne over 466.56 metres including the following intersections:

HOLE NO.	INTERVAL METRES	LENGTH METRES	COPPER %	GOLD GR/T
MO-99-4	85.06-170.43	85.37	0.97	0.53
AND	200.46-228.35	27.89	.98	.49

Mineralization is open to depth. The higher-grade sections have chalcopyrite and bornite in the biotite feldspar porphyry host, gold values increase in direct proportion to copper values. Core was assayed in 10 foot sections and assays will be available on the website. Drilling is continuing and more assays will be released when available.

The non-brokered private placement of 60,000 units announced 1Mar2000 and amended 22Mar2000 has been completed. The private placement units consist of one share at \$1.24 per share, and one warrant good to buy an additional share at \$1.55 exercisable for two years, for initial proceeds of \$74,400. The hold period for the securities is in effect until 5Sept2000. The proceeds of the private placement will be used for working capital purposes. No finders fee or commission is payable for this private placement. (SEE GCNL NO.85, 3May2000, P.3 FOR PREVIOUS MORRISON/HEARNE HILL PROJECT INFORMATION)
