DRC RESOURCES CORP.

[DRC-CDNX] 4,456,016 SHS.

ASSAYS AWAITED FROM TWO John Kruzick, president, DRC
NEW AFTON DRILL HOLES Resources Corp., reports the
diamond drill program on the
100% optioned, subject to 10% NPI, Afton Mine property, 10 km
west of Kamloops, BC, is successfully outlining copper, gold,
silver, palladium within the main mineralized zone. Two NQ
diamond drill holes have been drilled to date. DDH 2K-1 at -72°/315°
azimuth intersected the mineralized zone for 237 feet at a downhole
depth from 438 to 675 feet in a brecciated fine grained rock, where it
was suspended due to ground caving conditions in high grade copper,
gold mineralization. DDH 2K-2 at -74°/329° azimuth completed at a
depth of 1,455 feet intersected the mineralized zone for 769 feet
from 486 to 1,255 feet.

John Ball, exploration, manager and geological consultant, is
supervising a quality assurance program for the project. Consultants
J.J. McDougall & Associates, P.Eng., are overseeing and advising
on the drilling and geological fieldwork. All mineralized drill core
intervals were logged, split in half, sampled at 10 foot intervals and
shipped directly to Eco-Tech Laboratories Ltd. copper, gold silver
and palladium analysis. A check assay program has been
implemented where selected core intervals are sent to Cominco
Assay Labs and selected core samples of mineralized intervals are
being analyzed petrographically to identify sulphides and host rock
composition.

DRC will release data for the two diamond drill holes upon
receiving and compiling the assays results. Drilling is continuing
with DDH 2K-3 to be drilled at -80°/329° azimuth to intersect the
mineralized zone about 250 feet down dip from its intersection in
DDH 2K-2. (SEE GCNL NO.86, 4May2000, P.4 FOR PREVIOUS
