MORE MORRISON/HEARNE HILL ASSAYS - J. Paul Stevenson, CEO, reports

Pacific Booker Minerals Inc. has received assays from diamond drill hole MO-00-6 completed on the Morrison/Hearne copper, gold porphyry project 65 km northeast of Smithers, north-central BC.

This drill hole is located about 68 metres northwest of diamond drill hole MO-99-4 which returned 85.37 metres of 0.97% copper, 0.53 g/t gold. MO-00-6 is an angle hole drilled easterly at an angle of 75°. See assays above.

The Phase 1 program is continuing in the Southeast half of the property and a summary of drilling in the Northwest half is being prepared. Assays will be released when available.

Booker holds a 100% option on the Hearne Hill part of the project, subject to a 4% NSR, and can earn a 50% interest in the Morrison part from Noranda Inc. (SEE GCNL NO.111, 9Jun2000, P.5 FOR PREVIOUS DRILLING RESULTS)
