LOREX MINERALS INC.

[LRX-CDNX] 3,062,684 SHS.

EXPLORATION PROGRAM COMPLETED - Dr. J.Duro Adamec,

P.Geo., president,
reports Lorex Minerals Inc. has completed the Stage I exploration
program on the 100% owned Stan property, located 30 km north of
the town of Squamish, some 80 km northwest of Vancouver, BC.

The program was designed to evaluate the source of several
VLF-electromagnetic conductors and geochemical anomalies and to
further explore untested parts of the property.

Analytical results have been received for soil, rock chip and
drill core samples, which were assayed by Acme Analytical
Laboratories. Ltd. in Vancouver, BC.

Three drill holes out of five have intercepted disseminated
sulphide mineralization, which was likely the cause of geophysical
anomalies. The best interval was 1.50 metres from 51.20 to 52.70
metres in hole DDH99-01 which contained 0.114 oz. gold/ton.
Since no significant gold or base metal intervals were encountered,
the company will record assessment work but does not plan to
undertake the Stage 2 program at this time. (SEE GCNL NO.237,
10Dec99, P.3 FOR PREVIOUS STAN PROJECT INFORMATION)
