DRC RESOURCES CORPORATION

[DRC-CDNX] 4,456,016 SHS.

AFTON DRILLING UNDERWAY - John H. Kruzick, president, reports DRC Resources Corp. has begun the 5,000 metre diamond drill program on the 100% optioned, subject to 10% NPI, Afton Mine property near Kamloops, BC as recommended by J.J. McDougall, P.Eng., in his 10Nov99 geological report. Refer to Cross section overleaf P.3 in GCNL NO.44, 3Mar2000.

The Afton deposit is unique to North American porphyry deposits as gold grades increase rather than decrease in the sulphide zone beneath the oxide cap. Drilling will test the size and grade of the higher grade zones intersected in previous drill holes such as 0.1 oz. gold/ton over 70 metres in hole DDH80-4 and 2.5% copper over 200 metres in hole DDH73-32. Also, the drill program is designed to increase the known tonnage of 10,500,000 tons of 1.52% copper and 0.03 oz. gold/ton by extending the zone to depth and along strike.

DRC has the funds available to carry out the 5,000 metres, \$700,000 diamond drill program. The company will release the assay results as they become available. (SEE GCNL NO.69, 7Apr2000, P.3 FOR PREVIOUS AFTON MINE PROJECT DATA)
