PACIFIC BOOKER MINERALS INC.

[BKM-CDNX] 3,143,481 SHS.

MORRISON-HEARNE HILL - J. Paul Stevenson, CEO, Pacific
PROGRAM RESUMES Booker Minerals Inc., reports
work has resumed on the Morrison
- Hearne Hill project located 65 km northeast of Smithers, northern
BC. The camp and access roads are open and permit applications for
drilling have been submitted.

Pacific Booker will begin the drill program by continuing drill
hole 99-MO-4 to greater depth. Deep drilling of 99-MO-4 will
determine the potential for high copper grade mineralization at
depths beyond 1,007 feet within the Morrison porphyry system.
Drill hole 99-MO-4 averaged 0.75% copper and 0.40 grams
gold/tonne over 1,007 feet, with the bottom 62 feet averaging
0.77% copper and 0.52 grams gold/tonne.

The company will continue drilling throughout the spring and
summer of 2000 in order to complete the first phase of exploration
drilling on the Morrison. The year 2000 drill program was planned
by independent geological consultants.

Pacific Booker has received additional assay results from drill
hole 99-MO-4 and from trenching on the North Zone of the property.
Initial assaying of 99-MO-4 included only copper and gold. Pacific
Booker completed 32 element ICP analysis on the core to see if other
elements of interest were present. Results revealed that both silver
and molybdenum are present. Silver grades averaged 2.1
grams/tonne over 1,007 feet with 10-foot intersections up to 9.2
grams/tonne. For comparison, the Bell mine produced 27,813 kg of
silver averaging 0.36 grams/tonne (Average grades of copper and
gold at Bell were 0.39% and 0.16 grams/tonne, respectively.) The
ICP analysis also confirmed negligible levels of any elements that

detract from net smelter returns. Assays revealed that up to 26 grams
molybdenum/tonne are present over 10 foot intersections within
hole 99-MO-4. All drill holes on the Morrison will be assayed for
copper, gold, molybdenum and silver.

Results received from trenching over the North Zone in late fall
of 1999 revealed that economic grades of copper and gold
mineralization are present on surface. The results were used to help
delineate areas of potential higher-grade mineralization, where future
drilling is planned.

Pacific Booker has a 100% interest in the Hearne Hill project
and can earn a 50% interest in the Morrison Project from
NORANDA INC. (NOR-T). Pacific Booker Minerals recently
changed its name from Booker Gold Explorations Ltd. following a
five-old for one-new share consolidation.
