NEW COPPER SHOWING DISCOVERED - Frank Milakovich,  
president, reports

Dalmatian Resources Ltd. has found what it believes to be a significant new copper showing on its 100% owned Taylor River property located 37 km west of Port Alberni in the Alberni Mining District of Vancouver Island, B.C.

Current exploration and sampling along the contact between the Bedwell granite batholith and the volcanics on the western

portion of the property has located a highly altered, oxidized copper, silver surface showing. The mineralized zone outcrops over a distance of 70 to 85 feet and is exposed over a 20 to 25-foot width. Four channel samples were taken at 15-foot intervals along strike which returned the following assays:

SAMPLE NO.	COPPER %	SILVER OZ/TON	CHANNEL WIDTH
E-15-1	1.24	0.30	10.0
E-15-2	1.15	0.27	10.5
E-15-3	1.26	0.30	12.0
E-15-4	2.51	0.45	10.5

It is significant this showing corresponds to a geophysical anomaly over 300 metres in diameter which was identified in the 1996 E-15 airborne geophysical survey.

Dalmatian is currently conducting a 500 metre diamond drill program with 276 metres having been drilled to date. The first two holes were drilled in the Apex zone which previously intersected gold, copper values. Drilling of the third hole is currently underway in the area of the newly discovered surface showing. Mineralization was encountered in the first hole and core from this hole has been logged and split and is being slipped for assay. Results will be released when available.

Dalmatian received VSE approval 8Oct99 to the private placement of 187,000 units. This private placement has been completed with funds received by the company. (SEE GCNL NO.184, 24Sept99, P.3 FOR PREVIOUS TAYLOR RIVER PROJECT INFORMATION)
