BOOKER GOLD EXPLORATIONS LTD.

[BGE-V] 10,747,729 SHS.

MORRISON PROJECT - J. Paul Stevenson, CEO, reports Booker
EXPL'N REVIEW Gold Explorations Ltd., in its role as

an exploration model for the recent First

Nations-Mineral Sector Workshop at Granisle, BC, completed one
vertical diamond drill hole to a depth of 310 metres (1,018 feet) and
720 metres of trenching on the Morrison deposit 65 km northeast of
Smithers in the Babine Lake area of central BC, under a 50% option
from NORANDA INC. [NOR-V, T, M]. The purpose of the drill

hole was to ascertain vertical continuity of mineralization
intersected at depth by diamond drill hole Mo-98-2, (46 metres of
0.8% copper, 0.48 grams gold/tonne, 2.27 grams silver/tonne),
type of mineralization and fracture analysis to depth. Diamond drill
hole Mo 99-4 was collared 80 metres east of diamond drill hole
Mo-98-3 and is extensively mineralized with disseminated
chalcopryite and bornite, bottoming in mineralization. The hole
successfully extended the target zone and indicates vertical or near
vertical structures. The trenching program enabled Booker's
geologists to sample and conduct detailed mapping. Noranda's
trenches in the area were trenched in the 1960s by bulldozer but
never assayed. Booker retrenched and extended trenching using an
excavator. Assays are pending.

Booker Gold continues to work with members of the mining
industry and First Nations with a goal to bring certainty and investor
confidence to BC.
