## ANGLO SWISS RESOURCES INC.

[ASW-M; ASWRF- OTC BB] APPROX. 37,300,000 SHARES  
COLOURED STONES TO BE SOLD ON INTERNET: Anglo Swiss  
Resources Inc.

plans to open three E-commerce websites at:  
theiolitestore.com, thegarnetstore.com, gemspecimens.com, and  
thesapphirestore.net. Anglo Swiss intends to market finished  
gemstones and specimen material of the star sapphire, iolite and  
garnet on the Internet.

Prior to the recent discovery on the Anglo Swiss, Slocan  
Valley, British Columbia property, iolite was primarily found only  
in India, Tanzania, and Sri Lanka. Their new deposit is in the same  
area as the company's prior discovery of gem grade garnet and star  
sapphire. 100,000 rough carats of iolite crystal have been extracted  
by company personnel from two separate one tonne samples from  
surface outcrops located one kilometre apart. Iolite, a violet-blue  
gemstone, has a remarkable feature known as trichroism, meaning  
the colour changes when viewed from different directions.

The first public showings of the company's new iolite and  
garnet material at the Tucson Gem Show and the Prospector's and  
Developer's Conference in Toronto, confirmed the potential market  
for this new material. The March 1, 1999 issue of The National  
Jeweler magazine stated that although the blue gems captured a large  
part of the Tucson limelight, another stone that drew a lot of  
attention was garnet, occurring in grape and raspberry colors.

The selling of gemstone material is a perfect application for  
E-commerce on the Internet. [SEE GCNL NO.25, P.2, Feb.5, 1999,  
for previous gemstone data]
