

**PROLIFIC RESOURCES LTD. (POF-V)**

**GOLD & SILVER FOUND ON - Secretary/treasurer J.W. Davis,  
TOODOGGONE CAMP CLAIMS M.Sc., P.Geol., announces**

Prolific Resources' discovery of several gold mineralized zones on their wholly owned claims in the Toodoggone River gold camp 320 km north of Smithers, B.C.

Prospecting on the claims was completed to follow up anomalous gold values previously detected in stream sediments. Initial sampling returned a value of 0.11 oz.gold/t with 5.1 oz.silver/t from samples containing galena, minor sphalerite, and chalcopyrite in a zone 2 to 3 meters wide by 50 meters long. Grab samples from a quartz breccia 5 to 10m wide by 20m long returned values up to 0.22 oz.gold/t and up to 35.43 oz.silver/t. In addition, this quartz-calcite vein system contained massive galena and minor pyrite hosted by andesitic volcanics.

Trenching, geochemical sampling, followed by diamond drilling, if warranted, are planned for next year's summer field season.
