

**INTERNATIONAL CURATOR RESOURCES LTD. (IC-V)**

**NEW GOLD DISCOVERY IS - M.D. McInnis, president, reports LEASED IN SE ALASKA** that International Curator Resources Ltd. has entered an agreement to lease from private individuals 100% interest in the Dream gold prospect in SE Alaska subject to a 3% net smelter return royalty payable to the lessors. To maintain the lease, the company must spend at least \$US 10,000 by 1Jan89; \$15,000 more by 1Jan90 and \$25,000 each year thereafter until a total of \$200,000 has been spent on the property. Also, the company has paid \$1,500 on signing the agreement and must per annual escalating amounts which reach \$20,000 in 1993.

On 2Dec87, the U.S. Bureau of Mines published a report on the property's discovery. "Three previously unreported areas of mineralization, including what could be a major gold-silver-copper occurrence, have been discovered by a team of Bureau of Mines investigators in the central part of the Chilkat Mounts in SE Alaska. Preliminary examination of the sites, which are located about 20 miles south of the port city of Haines, suggests that they may have high potential for mineral development.

"One discovery consists of a several-foot-thick zone of volcanic and sedimentary rocks containing copper, iron, and arsenic sulphide minerals. Initial assays there have reported as much as 3.5 ounces of gold and 7.3 ounces of silver per ton with 2.1% percent copper and small amounts of zinc and cobalt. U.S. gold ores average about 0.1 ounce per ton, and ores containing significantly less gold can be mined profitably. Mineralization at the two other sites consists of quartz veins with lead, copper and iron minerals containing traces of gold and silver."

Mr. McInnis points out that this property has geologic similarities to and is contained within the same geologic terrain as the major polymetallic deposit, 60 miles to the south, at Greens Creek which Amselco is readying for production.

Extensive surface mapping and sampling are planned for the Dream property this summer prior to diamond drilling testing.

**NUSPAR RESOURCES LTD. (NUR-V)**

**FIRM HAS GOLD AND METHANE GAS - L.E. Sawyer president, PROJECTS ON VANCOUVER ISLAND** reports that Nuspar Resources Ltd. has contracted to sell 250,000 ounces of gold over a period of up to 5 years to a major international gold buyer. Nuspar is to receive an initial advance payment of US\$300,000 cash which will be added to its treasury. Some of the funds from the advance will be used to start mining gold and other metals at Nuspar's 13,000-acre Mount Vernon property 4 miles SW of Cowichan Lake on Vancouver Island, B.C. Over the past 6 months, Nuspar has tested a variety of processing equipment to determine the most suitable system for the separation and concentration of gold and other metals. The exploration and diamond drilling, ongoing for the last 16 months, continues to produce satisfactory mine-grade fire assays.

Mr. Sawyer also reports that management expect to finalize a joint venture agreement this month to provide \$3,000,000 to be used in exploration for methane gas on Nuspar's Chute Creek coal property in the Comox district on Vancouver Island and for further exploration of the Mount Vernon gold property.
