

TENTON RESOURCES CORP. (TUO-V)

DRILL CUT ENCOURAGING GOLD - Teuton Resources Corp. has **VALUE ON SULPHURETS CLAIMS** now received assays from the recently completed diamond drilling program on the Konkin gold zone located in the southern portion of their wholly owned 36-square mile block adjoining northeast of Newhawk/Granduc's Sulphurets gold-silver property some 60 miles north of Stewart, B.C. President D. Cremonese, P.Eng., reports that hole 87-2 drilled at -70 degrees, encountered a highly silicified zone carrying gold values over a substantial interval, see table of assays.

INTERVAL	FT.	FOOTAGE	OZ. GOLD/T'	
215.5	231*	15.5	0.320	' Difficult ground
	including			' conditions fore-
217.5	223	5.5	0.838	' stalled drilling
*End of hole				' beyond the 231-
				' foot depth

obtained. For the same reason, Holes 87-1 (-45 degrees, 200.5 feet) and 87-3 (-65 degrees, 174 ft.) were terminated before reaching target depths. These holes, as well as the upper portions of Hole 87-2, show a trend of increasing gold content with increasing depth.

Severe weather conditions forced cessation of drilling at the beginning of hole 87-4. A major surface follow-up is planned for the earliest opportunity in 1988.

This work, which is intended to define better the structure and attitude of the gold-bearing skarn mineralization in the Konkin gold zone, will be preliminary to a full scale drill test of some 5,000 to 10,000 feet. Use of a heavier drill rig is expected to preclude most of the problems associated with the 1987 drilling.

MENIKA MINING LTD. (MML-V)

SHOW & TELL - Manika Mining Ltd. has reported diamond **SET FOR 4NOV87** drilling is continuing on the Imperial zone, Reliance property, Goldbridge, B.C. The new 8 diamond drill holes from 87-39 to 87-46 intersected the mineralized zone. Assay results are awaited. See GCNL No.205, 1987 P.2 for earlier results from holes #37 and #38.

Mr. Robert Morris, M.Sc., project geologist, will outline the development of the Reliance property at the Mandarin Hotel, 654 Howe St., Vancouver, B.C., 4Nov87 from 2pm to 3pm.

FARAWAY GOLD MINES LTD. (FRW-V)

INTERVAL	LENGTH	OZ. SILVER/T	ZINC%
57.1 - 58.5	1.4m 4.6ft.	1.91	0.66
63.4 - 63.8	0.4 1.3	1.00	0.93
73.7 - 75.0	1.3 4.3	0.73	8.82
81.2 - 82.3	1.1 3.6	0.90	9.50

FIRST DRILL ASSAYS COMPARE - Faraway Gold Mines Ltd. has **WELL WITH EQUITY'S NEARBY** been advised of preliminary assay results from the first hole of the 20,000-foot drilling program on the SAM group of claims by Equity Silver Mines Limited, project manager. The property lies 2.5 miles SW of the Equity mine.

The first hole, 87-8, drilled on the East Zone returned a 45-foot section with ore values comparable to the gross dollar value per ton being currently mined at their Equity mine. An 86.3-foot section, between 183.7 270 feet in the hole, includes higher grade silver values plus significant zinc grades associated with zones of massive sulfides, see table above.

Anomalous gold values in the 0.16 to 0.25 g/t range were obtained from samples deeper in the hole. The lower part of the silver zone, between 68.7 and 82.3 meters, carried zinc values with an overall average of 3.04% and 26.3 meter (86.3 feet) core length averages 14.16 g/t (0.39 oz./ton) silver.

The first of two holes to test the zone above and below this intersection was scheduled to begin Oct28/87.

Several holes drilled on the West Zone have confirmed the presence of a broad quartz-sericite-pyrite alteration zone previously indicated by percussion drilling.. One hole intersected a 2-meter section of massive pyrite and sphalerite. Assay results are awaited for these holes.
