-----  
**DRILL PROGRESS REVIEWED** - Dutch Creek Resources report results from the first three diamond drill holes of their current work program on the Wisconsin property 10 miles from Nelson, B.C. Dutch Creek holds the property under an option from ESPERANZA EXPLORATIONS LTD. (EEP-V) to earn 100% interest by maintaining the property in good standing and conducting work culminating in a production decision. Esperanza can back in for 30% of its expenditures. This property comprises 2 Crown granted claims on which production from at least 2 underground levels occurred in the 1930's.

Management note that about 1 foot of massive mineralized sulfide material in Hole DDH 88-3 was lost, due to broken ground. Also, an 8-foot upper zone intersection encountered in that hole has not yet been analyzed. The new intersections of ore grade material across 17.8 and 27 feet indicate an excellent potential to increase tonnage figures in the Main zone. As one result, the drill program is being expanded from 5,000 feet to 15,000 feet and, for this, in-house financing is being arranged. Work crews are preparing roads and drill pads for the expanded program.

Dutch Creek is negotiating financing in the \$1,000,000 to \$2,000,000 range from a private investor.
